2. Housing	52
3. Feeding	54
4. Diseases	55
5. Egg Production	56
6. Egg Consumption	57
7. Marketing of Eggs	61
8. Import and Export of Eggs	62

LIST OF TABLES.

1. Comparative statement of Livestock etc. of Hyderabad State as censused in 1940 and 1935	68-65
2. Distribution of cattle per Sq. mile and per 100 acres of land	66
3. The average No. of cattle, carts and Ploughs per 100 of (1931) population	67
4. The No. of cattle etc. per 100 acres of actually cropped area in 1940 (1849 Fasli)	68
5. Serviceable and Unserviceable cattle	69
6. Distribution of Working animals according to the net area sown in 1939 (1848 Fasli)	70
7. Distribution of working animals according to the area accupied and No. of Pattadars	71
8. Comparative statement of the He & She buffaloes	72
9. The No. of milking animals	73
10. The No. of sheep and goats	74
11. Comparative statement of the No. of horses, mares etc. in various censuses.	75
12. Variation in the No. of ploughs in various censuses	76
13. Ploughs statistics of Hyderabad State	77
14. Carts Statistics of Hyderabad State	78
15. Distribution of sugarcane mills	79
16. The No. of stud bulls kept by the Government	80-81
17. Showing the number of Horses and Pony stallions kept by Government	82-83
18. Grazing Revenue for the year 1848 F.	84
19. Proportion of the grazing land in the total area of each district	85
20. Distribution of cattle in the districts of Hyderabad and neighbouring provinces	86
21. Cattle mortality 1848 F. (1938-1939)	88-91

22.	No. of deaths from contagious diseases amongst livestock during the Quinquennium	92-98
23.	Number of animals slaughtered during 1849 F. ..	94
24.	The total No. of animals inoculated for preventive and contagious diseases among livestock	95
25.	Total No. of cases treated by the veterinary department during the quinquennium	96
26.	The number of animals castrated by Veterinary Dept. ..	97
27.	The number of veterinary hospitals and dispensaries and the number of veterinary officers employed ..	98
28.	The No. of cattle and horse fairs and bazaars in Hyderabad State and the No. of animals present ..	99-105
29.	Hyderabad State imports and exports of livestock during the quinquennium	106-107
30.	Value of import of Livestock mahsulkhanawari ..	108
31.	Value of export of Livestock mahsulkhanawari ..	109
32.	The price of an average animal in 1940 (1849 F.) ..	110-114
33.	Value of import of leather, hides and skins .. .	115
34.	Value of export of leather, hides and skins ..	116
35.	Value of imports of leather and manufacture of goods (excluding boots and shoes) from 1840 to 1849 F. ..	117
36.	Imports of skin and leather articles, etc., in Hyderabad State	118-119
37.	Exports of skin and leather articles etc., from Hyderabad State	120-121
38.	Value of imports of wool	122
39.	Value of exports of wool	123
40.	Export of raw and manufactured wool	124
41.	Value of exports bones and bonemeal	125
42.	Railway Statistics about bone and bonemeal ..	126
43.	Value of imports of horns and hoops etc. ..	127
44.	Value of exports of horns and hoops	128
45.	Dairy establishments in Hyderabad State ..	129
46.	Per capita consumption of cows' milk in Hyderabad State per day	130
47.	Per capita consumption of buffaloes' milk in Hyderabad State per day	131
48.	Distribution of total milk produced in Hyderabad State to different uses	132
49.	Milk supply of sheep and goats	133
50.	Import and export of dairy produce of ghee and butter etc.	134
51.	Distribution of poultry	136-137

52. Comparative table for the production of eggs of different birds	138-141
53. Total poultry and their approximate value	142
54. Average number of fowls and ducks kept per village ..	143
55. Monthly wholesale prices for desi hen eggs ..	144-145
56. Talukwari statements of all the census figures ..	146-377
1. Schedule A oxen	146-217
2. Schedule B Buffaloes	218-289
3. Schedule C Other Live-stock	290-333
4. Schedule D Miscellaneous	334-377
57. Comparative statement of the neighbouring provinces and states	378-379
APPENDIX I=Instructions about livestock Census. ..	380-381
II=Schedules A to D and the prices Schedule.	382-389
List of persons who own cattle above 100 for breeding purposes in 1349 F.	390-392

LIST OF DIAGRAMS CHARTS ETC.

PREFACE.

This Report deals with the fifth quinquennial Livestock Census. As the 1935 (1344 F.) Report is more elaborate and deals with various aspects of livestock census in details, it was thought advisable to minimise the size ; hence, a discussion of the salient points alone has been made in this Report. I thank the Revenue Officers and the other officers concerned for rendering me all possible help and for their co-operation.

Mr. R. Thomas, my Deputy, Mr. G. Dastagir and Mr. Fida Husain, B.A., of my office, were of great help to me in tabulation and in drafting this Report.

MAZHAR HUSAIN, M.A., B.Sc.,
Director of Statistics and Census
Hyderabad-Deccan.

!

A CENSUS OF LIVE-STOCK, ETC., 1940 (1349 FASLI).

CHAPTER I.

ENUMERATION.

1. At the instance of the Government of India in the **General.** Department of Education, Health and Lands, and in accordance with the accepted recommendation of the Animal Husbandry Wing of the Board of Agriculture (India), the Government of H.E.H. the Nizam agreed to hold a live-stock census in January 1940 (Isfandar 1349 F.) simultaneously with other Provinces and States in India in order to ensure accuracy and comparability. Accordingly, the fifth quinquennial live-stock census in these Dominions was held between 25th to 31st January 1940 (22nd and 28th Isfandar, 1349 F.).

The dates of the four previous censuses were :—

1. 6th October 1919 (1st Azur 1329 F.).
2. 29th April 1925 (25th Khurdad 1334 F.).
3. 13th January 1930 (11th Isfandar 1339 F.).
4. 19-31st January 1935 (16th-22nd Isfandar 1344 F.).

2. A further communication was received from the **Enumeration Schedules.** Government of India saying that the schedule for enumeration has been widened so as to include pig and poultry (hen and ducks), which are important items in the economy of the country. It was also desired that the figures for dairy cattle should be recorded separately for urban and rural areas. The enlarged schedule was not accompanied by any model instructions. As the headings contained directions for filling up the census forms, no difficulty was experienced.

3. The form, however, was further enlarged so as to include some more items of agricultural interest locally, the additions being daily quantity of milk yielded by milch animals, *i.e.*, cows, buffaloes, sheep and goats; the number of groundnut decorticators (power and hand-driven)

hay mowers, cutters and hay presses, rahats, cream-separators, dairy establishments, oil presses (power, bullock and hand-driven), smithy and carpentry workshops and potteries. Thus there were 133 items to be enumerated. It was thought expedient to divide the items into four schedules, 1st for oxen, 2nd for buffalo tribe, third for sheep, goats, horses and other domestic animals and the fourth for poultry, agricultural machinery, etc. A supplementary schedule was attached to ascertain price per head of animal. A novel feature of the census this time was that the enumerators were asked to make entries of the animals with the names of the owners. Thus each schedule was sufficient for forty owners of the animals, etc. A copy of the schedules, instructions and summary table is appended to the report. (Appendix No. I).

Programme
of work.

4. On receipt of instructions from the Government of India the following programme of work was drawn up :—

(1) Forms to be printed and despatched before the 5th Isfandar 1349 F. (8th January 1940).

(2) Distribution of forms in the villages and preliminary arrangements to be completed by the Tahsils before 15th Isfandar (25th to 31st January).

(3) Enumeration to be held between 22nd and 28th Isfandar (25th to 31st January).

(4) The tahsil summary totals to reach the Director's office on or before 22nd Farwardi (24th February).

(5) Provisional totals to be sent to Government of India on or before 24th Khurdad 1349 F. (28th April).

(6) Final total, 9th Mehri 1349 F. (15th August 1940).

Endeavour made to follow the programme was successful.

Staff.

5. Allowances for two Superintending officers Rs. 150 and Rs. 100 per mensem for one year were pending sanction. The establishment sanctioned was:—

Establishment	1940	1935
1 Office Manager at Rs. 125 p.m. for 1 year	1,500	1,500
1 Typist at Rs. 80 p.m. for 1 year	960	960
6 clerks at Rs. 35 each for 1 year	2,520	2,520
3 peons at Rs. 12 each for 1 year	432	432
Stationery and contingencies ..	1,200	1,132
Printing of schedule, etc. ..	7,244	..
Allowance for Secretariat clerks ..	600	600
Total ..	14,456	7,144

6. The instructions were printed and issued in the Printing. principal vernaculars and the schedules were printed bilingual, *i.e.*, Urdu-Telugu; Urdu-Marathi and Urdu-Kanarese. A few forms in English were also printed for the use of the British Administered Areas and the Railway. These bilingual schedules were of great help to the enumerators as the wrong interpretations of the terms was thus avoided. This experiment was a success. In my tour I made enquiries whether the enumerators had experienced any difficulty in understanding the schedule. There were no complaints and the enumeration went on satisfactorily. The following numbers were printed :—

1. Instructions slips in Urdu	1,800
2. Schedules Urdu-Telugu for 10,503 Telugu villages (at the rate of 6 per village) ..	65,000
3. Price schedules Urdu-Telugu for 10,503 Telugu villages (at the rate of 2 per village)	21,000
4. Schedules Urdu-Marathi for 9,310 Marathi villages (at the rate of 6 per village) ..	56,000
5. Price schedules Urdu-Marathi for 9,310 Marathi villages (at the rate of 2 per village)	18,700
6. Schedules Urdu-Kanarese for 3,467 Kanarese villages (at the rate of 6 per village).	20,800
7. Price schedules Urdu-Kanarese for 3,467 Kanarese villages (at the rate of 2 per village)	6,900

8. Schedules English	1,000
9. Summary forms (Goshwara) for live-stock and machinery in Urdu, 500 for tahsils and 200 for Municipalities and Statistics Office (at the rate of 2 each)	1,400
10. Summary (Goshwara) in Urdu for Price Schedules.	1,400

The paper estimated was 639 reams, 13 quires and 14 sheets.

7. In this census the Tahsildars were instructed to prepare the summary totals for their talukas according to instructions because all the original schedules of the villages would be received in the Tahsils and the Tahsil summaries (Goshwaras) could be prepared there.

The agency. 8. The Revenue Secretary issued circular letters to all the Revenue Officers, jagirdars, secretary to Sarf-i-Khas Mubarak, Director-General, District Police, Commissioner of City Police, Commissioner of City Municipality, Director of Court of Wards and to each Mir Majlis of Paigahs and to the Samasthans to assist the Department in the enumeration of live-stock. Exempted jagirdars were made responsible for the census of their area while the non-exempted had to work under the guidance of the tahsils concerned. The British Administered Areas were censused through the Cantonment Authorities and the Railway area by the Railway Staff. In the Dewani areas, the patwaris enumerated the live-stock. There was no report of non-co-operation or unwillingness to do the work assigned, from any quarter. The experience gained by them in the previous census in the matter of determining the ages of animals stood them in good stead.

Inspection. 9. I made a tour of inspection in the following places. Atrai-i-Balda, Sangareddi, Sadasivpet, Devarkonda, Bidar, Andol Jogipet, Aurangabad and Ellora village.

Mr. Fida Husain, B.A., was sent on to Medchal, Nizamabad, Nander, Parbhani, Jalna, Aurangabad and Khuldaabad.

Tahsildars took personal interest in the Live-stock Census in their respective areas. Some of them toured extensively and some required extension of time for submission of summaries.

10. Talukwari registers were made in my office from the schedules received for proper record and future comparison. Registrar

11. The provisional total was arrived at by taking the summary figures received from the tahsils and communicated to the Secretary to Government in the Revenue Department and to the Government of India on 29th April 1940 (25-7-1349 F.). The number of agricultural cattle was found to be comparatively less than in the preceding quinquennial census by 3.4 per cent. (under oxen 3.9 per cent. and under buffalo 1.8 per cent.). This is also the case this time in the neighbouring Provinces. Provisional
& Final
Totals.

After despatching the provisional total the summary schedules were subjected to a thorough checking and arithmetical errors were discovered. The final figures which were despatched to Government of India on 20th August (14th Mehir) slightly varied from the provisional total in many respects but the difference in the case of oxen was 8.3 per cent. instead of 3.9 per cent. A comparative statement of the live-stock for 1940 (1349 F.) and 1935 (1344 F.) is given in table No. 1.

12. It is required by the Department of Commercial Intelligence and Statistics, India that :—

(1) Enumeration should be done separately for rural and urban areas in each district. For this purpose any self governing urban unit, continuous collection of houses ordinarily inhabited by not less than 5,000 persons and having an urban character.

Hence the enumeration was classified into Rural and Urban Areas of H.E.H. the Nizam's Dominions, and the figures classified accordingly were sent to the Department referred above. The total cattle of the cow type were 9,527,382 in the Dominions, out of that only 3.3 per cent. were found in urban and the remaining 96.7 per cent. in rural areas.

The total cattle of the buffalo type were 3,032,421 in the Dominions out of that only 5.2 per cent. were enumerated in urban and the remaining 94.8 per cent. in rural areas.

13. For easy reference the percentage of the live-stock is shown in the following statement :—

Serial No.	Live-stock and Poultry and important elements	RURAL		URBAN	
		Total	P.C.	Total	P.C.
1	Sheep	5,822,501	97.0	177,792	3.0
2	Goats	3,441,215	96.3	131,371	3.7
3	Horses and Ponies ..	121,808	88.8	15,317	11.2
4	Mules	173	24.7	527	75.3
5	Donkeys	63,897	87.6	9,075	12.4
6	Camels	1,190	85.9	196	14.1
7	Pigs	190,062	95.3	9,352	4.7
8	Poultry	6,691,423	94.0	614,364	6.0
9	Ploughs				
	(a) Iron	61,413	92.2	4,711	7.8
	(b) Wooden	1,218,468	96.0	42,725	3.4
10	Carts	527,468	94.0	33,949	6.0

A comparative statement of the live-stock for 1940 (1349 F.) and 1935 (1344 F.) is given in Statement No. 1.

Legislation. 14. Besides the permanent Population Census Act, a 'Bill for special legislation for the collection of statistics' was prepared and submitted to Government in 1940 (1349 F.). This is comprehensive and includes live-stock census as well. It is expected to be placed before the Legislative Council in 1941 (1350 F.).

Conclusion. 15. In concluding the Chapter, I acknowledge, with thanks, the co-operation of the Revenue Officers, jagir and samasthan holders, officers in charge of British Administered areas, the Hyderabad Municipal Corporation, Railways and others. The work of censussing the live-stock of these Dominions calls for a big organisation, for an intensive survey of the cattle wealth, a careful reckoning, and a sympathetic treatment of the agricultural population in whose interest this quinquennial event is held. In this task both officials and non-officials shared the responsibility with the Department of Statistics and Census. Although extensive tour of inspection of the operation could not be done by me and my assistant for lack of travelling allowance, I have more reasons to believe the accuracy to a greater degree of the results obtained in this census as enumeration was made with the names of every individual owner and not a round figure for every village.

CHAPTER II.

CENSUS ANALYSIS

16. India, as a whole, possesses nearly one-third of the world's recorded number of cattle and buffaloes ranging up to 25 crores of animals. In Hyderabad nearly 69 per cent. of the human population depends directly or indirectly on agriculture as a means of livelihood. To agriculturists next to the land his cattle both for work and other purposes, are the most precious possession. A pair of bullocks or a cow forms the usual bride-price in rural areas. A man's economic status is measured by the number of animals he possesses. It is thus that the Indian rural population has come to recognise the value of live-stock regardless of age or utility of the animals. Hindus and animists venerate them. For these reasons, aged, defective and useless stock continue to exist in large numbers. General.

17. The area of the Dominions of His Exalted Highness the Nizam, excluding Berar, is 82,698 square miles, which is equal to, half and three times the size of Bombay Presidency, Madras Presidency and Mysore State respectively. The cattle population is distributed all over the cultivated and non-cultivated areas as well as in plains, forests and hills. At the time of the Census (last week of January) a large part of live-stock was on the move from the villages for new grazing areas. The early crops were under harvest and animals were seen grazing in the fields. In other places, herds and flocks were found along river banks and hill sides where pasture could be had. Area.

18. The economic condition of the country during the quinquennium was not very satisfactory. The falling prices of agricultural commodities caused great hardship to the producers. In large areas farm changed hands, money-lenders becoming land-owners. Government after investigating into the extent of agricultural indebtedness introduced (1) the Debt Conciliation Bill, (2) the Hyderabad Money-lenders Bill, and (3) the Hyderabad Co-operative Land Mortgage Bank Bill. The economic condition showed slight improvement when the Economic condition

European War broke out. The failure of rains also in Adilabad and Karimnagar districts in 1939 (1348 F.) brought about much distress. Government opened relief camps and works for the labour.

Seasonal
condition.

19. *1st year of the quinquennium.*—In 1935-36 (1344-45 F.) the average rainfall was 35.09 inches, normal being 30.07 inches. Water-supply for the cattle was deficient in parts of Aurangabad and Medak districts and of fodder in Gulbarga and of both in Raichur and Nalgonda. Cattle diseases were widespread in the rural areas of Warangal, Karimnagar, Adilabad, Nizamabad, Medak, Mahbubnagar, Aurangabad, Gulbarga, Osmanabad and Raichur. In Nalgonda, Parbhani, Nander and Bidar the outbreaks were sporadic and not of long duration. In some districts of the Dominions the diseases persisted throughout the year.

20. *2nd year.*—In 1936-37 (1345-46 F.) the total rainfall amounted to 35.86" as compared with 30.40" normal. In the Marathwara districts water and fodder supply for live-stock was much in defect. Pasture was sufficient in Telingana districts and not so in some villages of Marathwara districts. Cattle diseases were not widespread in the first part of the year. In the latter part of the year, particularly, in the month of August 1936 (Mehir) six districts in the Telingana and five in Marathwara were infested. The disease subsided with the beginning of the cold season.

21. *3rd year.*—Rainfall was 29 inches. The unfavourable seasonal factors in 1937-38 (1346-47) were responsible for fodder deficiency specially in Mahbubnagar, Gulbarga and Raichur. Contagious diseases among the cattle were reported from four districts in Marathwara and six in Telingana. In the wake of the winter season the diseases began to subside. But with the advent of hot weather, coupled with water and fodder deficiency, the diseases again spread in the whole of Telingana at the end of April 1938 (Khurdad 1347 F.).

22. *4th year.*—The total for the entire period in 1938-39 (1347-48 F.) was 39.96" or 9.51" above normal. Fodder stock and pasturage were generally sufficient except in some tracts of Warangal, Karimnagar, Medak,

Bir and Bidar. Contagious diseases were prevalent in some parts throughout the year, Nizamabad being conspicuous.

23. *5th year.*—Rainfall was 27.36" and the other seasonal conditions affecting agriculture in the year 1939-40 (1348-49 F.) were unsatisfactory. Water-supply was deficient in some parts or other of the Dominions throughout the year. The shortage of the fodder was felt principally in 4 districts in Marathwara and 3 in Telingana. Cattle diseases were prevalent throughout the year in Atrai-Balda, the other centres which had been infected were Warangal, Karimnagar, Bir, Raichur, Nizamabad and Nalgonda.

Rinderpest, the most deadly of cattle diseases, was present in active form in some part or other of the Dominions for a large part of the year.

24. Cattle trade continued as usual during the quinquennium, the total number imported and exported being 327,694 and 6,223,554 respectively. The total value of imports and exports during the period under review is shown in a graph. Cattle trade.

25. Total population of cattle in India is 180 million, *i.e.*, 3/7th of the whole world's stock of 1917. The total number of cattle of all ages and description enumerated in Hyderabad State is 12,559,803 as compared with 13,008,282 in 1935 (1344 F.) a decrease of 3.4 per cent. (vide table No. 1 appended). In the absence of any serious epidemics or other extraordinary circumstances, it is difficult to believe that the cattle population has really diminished. The contagious diseases which are peculiar to certain areas and seasons were no doubt prevalent. The export of cattle was as brisk as usual during the quinquennium. Under these circumstances the cause for the decrease in the number should be sought in some other direction. It is quite probable that during the enumeration period heads of cattle had moved away from the villages to distant places for grazing and that they could not be brought back for enumeration. On the whole Telingana accounted for a decrease of 2.9 per cent. and Marathwara 4.1 per cent. Total oxen & Buffaloes.

For the purpose of comparison the figures for Hyderabad and the neighbouring Provinces are set forth in the

subjoined statement. From this it will be evident that there is a drop in Madras and Bombay and rise in C.P. and Berar.

Provinces		Total cattle in 1940 (1349 F.)	Total cattle in 1935 (1344 F.)	P.C. of variation between 1935 & 40
Hyderabad State.	..	12,559,803	13,008,282	— 3.4
Madras.	..	22,119,402	24,606,855	— 10.1
Bombay.	..	9,733,659	9,961,494	— 2.3
C.P. and Berar.	..	13,278,860	12,346,979	+ 7.5

Marathwara lost under all heads, except young stock of the buffalo group, by 6.9 per cent., while Telingana gained in female and young stock under buffalo by 1.8 per cent. and 0.8 per cent. respectively. It is striking that while all the districts returned less than in the last quinquennium, Warangal district alone showed 9 per cent. increase. The following statement compares the figures for cattle (in thousands) in the two natural divisions :—

Class		MARATHWARA		TELINGANA	
		1940 1349 F.	1935 1344 F.	1940 1349 F.	1935 1344 F.
Oxen	Male ..	1,874	2,008	1,834	1,981
	Female ..	1,202	1,260	1,719	1,738
	Young Stock ..	1,403	1,434	1,495	1,497
Buffaloes	Male ..	63	114	374	424
	Female ..	632	632	695	683
	Young Stock ..	624	598	643	638

Telingana supports a heavier cattle population than Marathwara. Her share of the live-stock represents 53.8 per cent. as compared with 53.5 per cent. in the previous quinquennium. Marathwara claims 46.2 per cent. The distribution of agricultural cattle is dependent upon the nature of the land cultivated, the extent of irrigation, the amount of scrub available in the jungle for grazing and the strength of the rural population and size of the holdings.

26. The density of cattle varies according to extent of cultivation and the grazing facilities. In Telingana, Medak commands the highest density, 210 per square mile of territory, followed by Nalgonda with 192, Karimnagar 184 and Atraf-i-Balda 183. In Marathwara, Bidar has 185 head of cattle per square mile and Nander 184. Raichur which is in the famine zone and is denuded of shrubs and forests has only 96 per square mile as compared with 100 at the last Census. (Vide table No. 2 appended).

In table No. 3 appended, the average number of farm cattle, ploughs and carts per 100 of population in each district are shown. Warangal heads with 109 head of cattle per 100 of population. It is studded with forests. Banjars and Lambadas who inhabit the jungle regions of the district keep large herds of cattle for breeding and sale purposes. Bidar comes next with 103 followed by Nalgonda and Adilabad (102), and Nander (100).

27. The foregoing discussion merely refer in general terms to the distribution of cattle among the whole population of a district, irrespective of occupations of the people. To obtain a proper perspective of the agricultural population and their equipment, table No. 4 may be consulted. It shows the number of working animals, milch animals, cultivators, ploughs and carts per 100 acres of actually cultivated area in 1940 (1349 F).

28. An interesting feature of the Census was the determination of the number of adult cattle which are unfit for work or for breeding purposes. Among the oxen tribe 4.7 per cent. and among buffalo tribe 1.6 per cent. are returned as useless. Madras has 7.7 per cent. of her oxen family returned as useless; Bombay 3.4 per cent. and C.P. and Berar 1.7 per cent. These animals do not receive as much care and attention at the hands of

Unservice-
able cattle.

their owners as other animals which are an asset from productive point of view.

Provinces	OXEN AND BUFFALOES			Serviceable animals total	P.C. of unserviceable to serviceable
	UNSERVICEABLE ANIMALS TOTAL				
	Males	Females	Total		
Hyderabad State.	191,010	185,019	326,029	8,067,142	3.9
Madras.	808,917	208,233	1,017,150	15,263,586	6.2
Bombay.	170,744	21,555	192,299	6,616,049	2.8
C.P. and Berar.	116,073	28,868	144,941	9,053,532	1.6

Therefore, the unfit creatures are let loose for most part of the day. They roam about the village picking anything they can find and return to the fold in the evening. They are maintained for the value of the dung when alive and the skin when dead. Nizamabad heads the list of districts for useless stock by having 7.9 per cent. of her total number of oxen followed by Mahbubnagar 7.2 per cent., Nalgonda 6.3 per cent., Atraf-i-Balda 5.9 per cent., Medak 5.7 per cent. and Adilabad 5.2 per cent. Parbhani claims to have the smallest percentage, *viz.*, one.

29. Buffaloes are hardier and more worked than oxen. They are brought into use regularly and up to advanced age. The percentage of unserviceable animals is only 1.6 for the Dominions; although Warangal has 3.3 per cent. and Baghat 2.4 per cent. (Table No. 5).

Bulls &
Bullocks.

30. It was easy for enumerators to distinguish a working from a non-working beast; but the distinction between a bull and a bullock was hard to understand, due to unsuccessful or half-castration. Among bullocks, some were castrated while a large number served a dual purpose. Further, well-fed young stock sometimes are usually passed for breeding bulls and brought under the ploughs or yoke, however immature they may be. This accounts for the fluctuation of the number from one census to the other. Adult bulls and bullocks over 3 years

of age number 3,707,572 as compared with 3,985,549 in the preceding quinquennium, a decrease of 7.0 per cent. The fall is shared by both the Marathwara and Telingana districts. As compared with the last census, in Marathwara there is a fall of 133 thousand and in Telingana 147 thousand bulls and bullocks.

31. Of the total number of adult bulls and bullocks 1.1 per cent. are breeding bulls and 173,911 or 4.7 per cent. are unserviceable. This shows the enormous economic wastage caused by the maintenance of so many unserviceable animals. The proportion of bulls to cows is 1.69 as against 1.40 last time. In the neighbouring Provinces the ratios have not varied so much as in these Dominions as may be seen in the following statement :—

Provinces	1940 (1349 FASLI)		1935 (1344 FASLI)		PROPORTION OF BULLS TO COWS	
	Bulls	Cows	Bulls	Cows	1940 1349 F.	1935 1344 F.
Hyderabad State.	40,220	2,796,304	67,537	2,712,978	1.69	1.40
Madras. ..	110,863	5,500,840	169,285	5,409,966	1.49	1.32
Bombay. ..	37,099	1,986,429	34,259	1,968,853	1.53	1.57
C.P. & Berar.	54,860	3,503,452	110,183	3,062,920	1.63	..

Taking an average of 40 cows to a bull the present number appears too inadequate.

32. Government, through the Veterinary Department maintains some breeding bulls in Hyderabad, in Mahbubnagar and in Hingoli. The number of serviceable bulls in relation to breeding cows according to the present census is 40,220 or a bull for 69 cows. The proportion of cows to a bull ranges from, 231 in Nalgonda to 38 in Mahbubnagar. In the Marathwara districts Bir can muster only one bull for 174 cows whereas in Gulbarga the proportion is normal. But this is not a true state of affairs. As said elsewhere, uncastrated bullocks are large in numbers. In the category of "working bullocks" *i.e.*, bullocks and uncastrated males over 3 years kept for work only, come 3,493,441. Of this, allowing for 75 per cent. for castrated animals, there remain 873,360 uncastrated bullocks. These added

to 40,220 "bulls over 3 years used for breeding" give 913,580 serviceable animals, for 2,600,883 adult cows kept for breeding or milk production. However, the proportion of cows to breeding bulls is shown in the following statement :—

Sl. No.	Districts	No. of bulls	No. of cows	Proportion of cows to a bullock
1	2	3	4	5
1	Hyderabad City.. ..	82	3,510	42.8
2	Baghat.. ..	245	17,093	69.6
3	Atraf-i-Balda	1,897	98,491	51.7
4	Warangal	2,572	317,438	123.4
5	Karimnagar	2,767	255,465	92.3
6	Adilabad	2,870	213,101	74.2
7	Medak.. ..	1,235	127,576	103.3
8	Nizamabad	1,501	99,985	66.0
9	Nahbubnagar	6,034	231,412	38.3
10	Nalgonda	1,151	266,539	231.5
	Telengana total ..	20,354	1,630,610	80.1
11	Aurangabad	1,132	150,088	132.6
12	Bir	725	126,379	174.3
13	Nander	2,013	160,998	79.9
14	Parbhani	1,824	129,130	69.7
15	Gulbarga	8,907	182,770	20.5
16	Osmanabad	884	109,140	129.3
17	Raichur	2,003	127,334	63.5
18	Bidar	2,418	179,855	74.4
	Marathwara total..	19,866	1,165,694	58.7
	Hyderabad State 1940 ..	40,220	2,796,304	69.4
	Do 1935 ..	67,537	2,712,978	40.1

33. As in other parts of India, so in these Dominions cattle owners maintain a certain number of bulls according to their means. They may not be of an ideal type for breeding but from the local varieties good specimen are reserved for the purpose. As they have no means of preventing bulls of inferior breed and build crossing the village cows, the services of good stud bulls are to a serious extent neutralised. Bulls dedicated to deities are also found in rural areas.

34. In the rural reconstruction centres attention is paid to the provision of efficient service bulls in large size villages and the cattle owners are advised to have scrub bulls castrated and prevent as far as possible promiscuous crossing. But superstitions and conservatism continue to grip the village community. During the years of the quinquennium under review the officers of the Veterinary Department castrated as many as 169,691 animals as compared with 117,261 in the preceding five years.

Years		Castration
1.	1345 F. (1935-36)	.. 28,874
2.	1346 F. (1936-37)	.. 34,540
3.	1347 F. (1937-38)	.. 30,777
4.	1348 F. (1938-39)	.. 31,411
5.	1349 F. (1939-40)	.. 32,651
6.	Quinquennium total	.. 158,253
7.	Last do do	.. 117,261.

Districtwari details are given in table No. 26.

35. Agriculturists do not exercise much care and attention to the improvement of the stock of breeding bulls as they ought to but they attach great importance to the well-being of working animals, as they are the main-stay of the agriculturists. The death of a working animal is regarded as a great loss. In the present Census 3,493,441 working animals were enumerated, showing a decline of 2.8 per cent. on 1935 (1344 F). This number,

Working
bullocks.

considered in relation to the acreage of cultivated and fallow lands is inadequate as shown below :—

Provinces	1940 (1349 FASLI)		1935 (1344 FASLI)		No. of ACRES PER PAIR	
	Bullocks	Acreage	Bullocks	Acreage	1940	1935
Hyderabad	3,493,441	27,054,142	3,595,335	32,590,982	15.5	18.1
Madras ..	5,709,157	31,379,843	6,176,509	43,966,505	11.0	14.2
Bombay ..	3,093,006	28,779,649	3,169,634	33,680,101	18.6	21.2
C.P. & Berar	4,058,312	24,369,333	3,990,832	24,668,067	12.0	12.3

From the above it is evident that not only in Hyderabad, but in other adjoining major Provinces also the area per yoke of oxen has diminished. On the other hand, the number of plough cattle has increased.

36. The number of cultivators in 1939 (1348 F.) was 1,841 thousand who brought under plough 27,054 thousand acres of land employing 3,297 thousand animals. This works out at roughly 2 animals per cultivator. In Baghat district as many as 6 animals per cultivator are recorded.

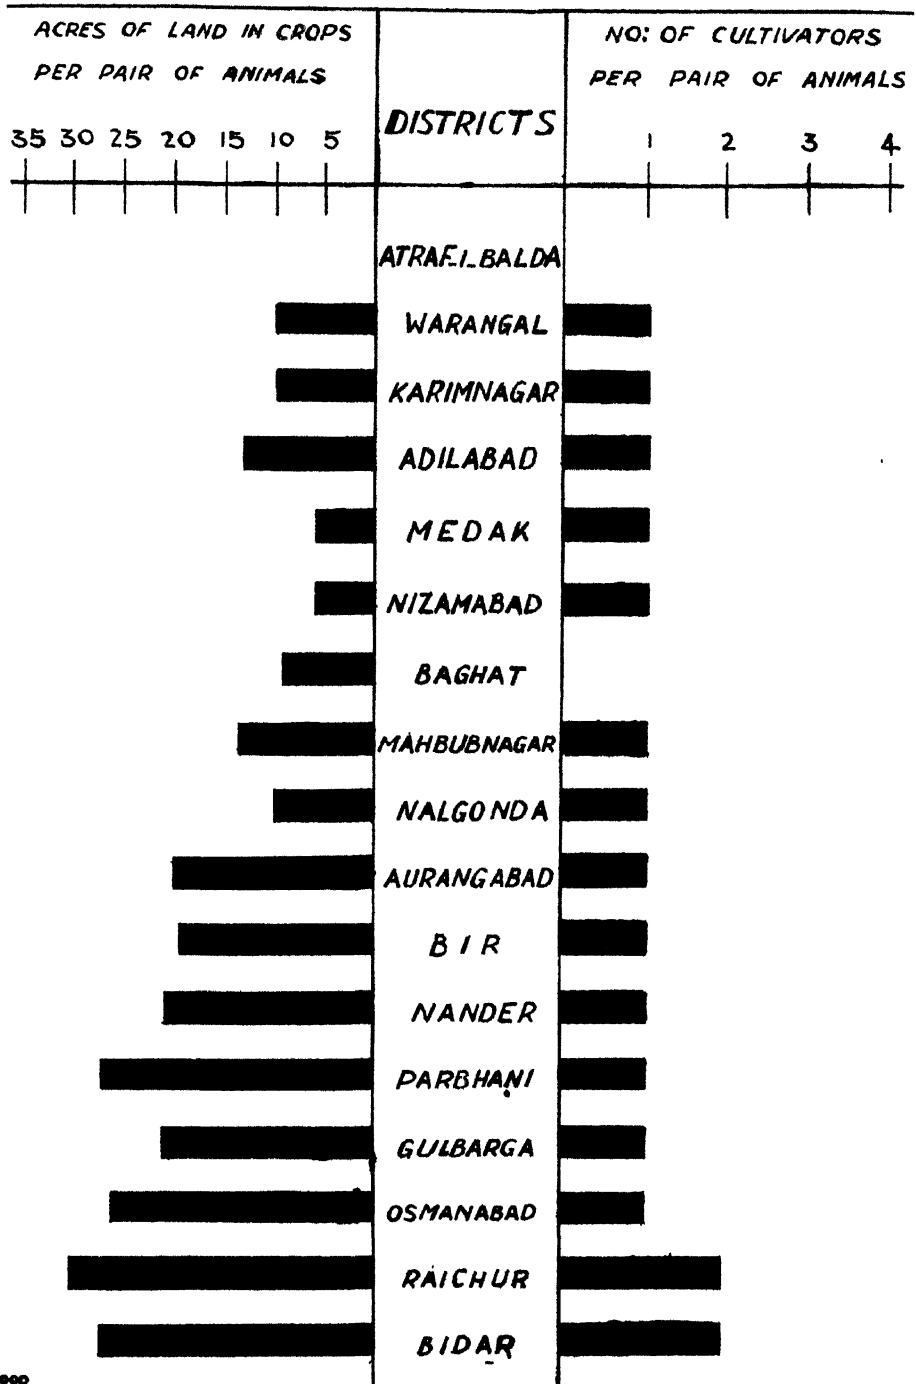

The average number employed per 100 acres of land is 12.2 for the Dominions, although it is 18.5 in Telangana and 8.5 in Marathwara. Baghat again commands 23 animals per one hundred acres, Medak and Nizamabad having as many as 33 animals each. Marathwara cultivation being dry, the need for maintaining a large stock is unnecessary. Therefore, as shown in table No. 6, the average number of working animals per 100 acres of cultivated land ranges from 6 in Raichur to 10 in Bir and Aurangabad.

Cows.

37. The number of cows enumerated (2,921,118) is a decrease of 2.6 per cent. upon the last quinquennium. Telangana has 59 per cent. and Marathwara 41 per cent. of the cow population and the decrease this time is shared

WORKING ANIMALS

ACRES OF CROPS & NO: OF CULTIVATORS PER PAIR OF
WORKING ANIMALS

by both the divisions though unequally. Marathwara 4.6 per cent. and Telingana 1.1 per cent.

Year	Total number	Marathwara	Telingana
1940 (1949 F.) ..	2,921,118	1,202,230	1,718,888
1935 (1944 F.) ..	2,998,588	1,260,534	1,738,054

In the neighbouring Provinces of Madras and Bombay the cow strength has decreased by 5.3 and 1.4 per cent. respectively during the quinquennium. In C.P. and Berar it has increased by 2.77.

Provinces	1940 (1949 FASLI)				Total No. of cows (1935)	P.C. of variation between 1935 & 1940
	Breeding cows	Working cows	Useless cows	Total No. of cows		
Hyderabad State.	2,600,883	195,421	124,814	2,921,118	2,998,588	- 2.6
Madras. ..	4,998,618	502,222	164,850	5,665,690	5,984,793	- 5.3
Bombay. ..	1,974,739	11,690	13,119	1,999,548	2,028,729	- 1.4
C.P. and Berar.	3,461,836	41,616	23,047	3,526,499	3,481,505	+ 2.77

Out of the total number of adult cows 4.3 per cent. are unfit either for breeding or work, and 6.7 per cent. are used for work only, the rest are breeding animals. The total number of the breeding and mulch cows is 2,600,883 or 89 per cent. of the total cows (table No. 9) against 88 per cent. in Madras and 98 per cent. each in Bombay and C.P.

38. Young stock, male and female, is classified according to age-groups in the following manner :—

Young Stock	Male	Female
Under one year	983,599	1,109,287
One to three years	920,297	1,152,449
Total three years and under (1940)	1,903,896	2,262,736
Total three years and under (1935)	1,347,336	1,583,998

Thus there is a total young stock of 4,166,632. The majority of female is conspicuous.

Buffaloes.

39. In Telingana districts buffaloes are found in larger numbers than in Marathwara for the reason that there agriculture under irrigation is more intensive and buffaloes stand hard work in wet lands better than bullocks. They thrive on cast-away fodder and except the she-buffaloes in milk others cost very little for feeding. The number returned is 30 lakhs, nearly the same as in the previous census :—

Class			1940 1849 F.	1935 1844 F.	1930 1839 F.
Male	437,169	538,412	580,537
Female	1,327,312	1,315,185	1,240,182
Young stock	1,267,940	1,236,214	1,282,163
Total			3,032,421	3,089,811	3,102,832

He-buffaloes number 437,169 or 18.8 per cent. less than in 1935. The decrease is shared both by Marathwara and Telingana. The female shows an increase of 11 thousand and the young stock 31 thousand. The number of male buffaloes in Telingana are five times greater than that in Marathwara. This proportion has remained fairly constant from time to time as the following statement shows :—

Year		Marath- wara	Telingana
1940 (1849 F.)	..	62,826	374,343
1935 (1844 F.)	..	113,941	424,471
1930 (1839 F.)	..	128,695	451,942

Of the total number of buffaloes only 1.6 per cent. are unserviceable. In Madras the percentage of such animals is 3.7, in Bombay 1.3, and in C.P. 1.0.

Buffalo-Bulls

40. The buffalo-bulls kept for breeding purposes number 11,319. In Telingana, Adilabad district and in Marathwara, Parbhani district have the largest number of breeding bulls. The ratio of bulls to cows in these

Dominions is compared with that in the neighbouring British Provinces in the subjoined statement :—

Provinces	1940 (1349 FASLI)		Proportion of bulls to cows
	Buffalo-bulls	Buffalo-cows	
Hyderabad State ..	11,819	1,827,812	1.116
Madras ..	50,146	2,977,574	1.590
Bombay ..	16,420	1,322,887	1.810
C.P. and Berar ..	20,116	889,551	1.440

Castrated and uncastrated he-buffaloes are used as plough animals in the paddy cultivation and also for carrying loads of country liquor (toddy), sand and such other articles. The adult animals are used in the cart and the plough. They form a valuable auxiliary to the ox-variety.

41. The stock of she-buffaloes of all description has been maintained; the growth in number being fairly steady. She-buffaloes

Years	Animals
1940 (1349 F.)	.. 1,827,312
1935 (1344 F.)	.. 1,315,195
1930 (1339 F.)	.. 1,240,132
1925 (1334 F.)	.. 1,018,948
1920 (1329 F.)	.. 1,188,824

Since the last census there has been an increase of 7.6 per cent., while in Madras and Bombay it is 10.4 per cent. and 5.6 per cent. respectively.

Provinces	1940 (1349 FASLI)				P.C. of variation 1935 and 1940
	Breeding cows	Working cows	Useless cows	Total No. of cows	
Hyderabad State	1,300,033	17,074	10,205	1,327,312	+ 7.6
Madras ..	2,869,164	65,027	43,383	2,977,574	+ 10.4
Bombay ..	1,302,509	11,942	8,436	1,322,887	+ 5.6
C.P. & Berar ..	887,784	5,946	5,821	899,591	..

Of the total number 97.9 per cent. are breeding and milch buffaloes, 1.3 per cent. working animals and 0.8 per cent. useless. Distribution of buffaloes in the districts is found in table No. 8.

Young stock. 42. Calves of both the sexes number 1,267,940 which shows an increase on the preceding quinquennium of 31,726.

YOUNG STOCK BUFFALOES

Year	Total young stock
1940 (1349 F.)	.. 1,267,940
1935 (1344 F.)	.. 1,236,214
1930 (1339 F.)	.. 1,282,163
1925 (1334 F.)	.. 911,022
1920 (1329 F.)	.. 902,850

According to ages, the calves may be grouped thus : Under one year, 310,790 males and 417,009 females, and between one and three years, 173,649 males and 366,492 females, making a total of 484,439 males and 783,501 females. Here again, the number of female young stock exceeds that of male. When compared with Bombay and Madras the proportion of male to female young stock is as follows :—

Bombay 1 : 3 ; Madras 2 : 3 ; Hyderabad 4 : 7 ; and C.P. and Berar 1 : 2.

Sheep & Goats. 43. Sheep and goats in India are 87 millions, *i.e.*, $\frac{1}{8}$ th of the world total. The population of sheep and goats as censused in Hyderabad State is 6,000,293 and 3,572,586 respectively. The ratio being 60 : 36. These figures as compared with the previous quinquennium show a small increase as set forth below :—

Class	1940	1935
Sheep ..	6,000,293	5,936,400
Goats ..	3,572,586	3,373,366
Total ..	9,572,879	9,309,766

VARIATION IN PRICES OF SHEEP & GOATS IN HYDERABAD STATE 1940

During the quinquennium, the total number of sheep and goats has increased by only 2.8 per cent. in Hyderabad State as compared with 19.7 per cent. in Madras and 30.7 per cent. in Bombay. The percentage of increase or decrease in districtwari is shown in the table No. 10.

Of the total number of sheep and goats in the Dominions, 64 per cent. are found in Telingana, where pasture is in abundance at all seasons both in field and forests. Nalgonda is the largest sheep breeding centre. Gulbarga and Raichur in the Marathwara division have a large sheep population, greater facilities for grazing being found in the riverain tracts of Bhima and Tungabhadra rivers. The same districts are noted for goats too.

In the following statement, Hyderabad State is compared with the neighbouring Provinces with regard to the sheep and goats censused.

Provinces	Sheep	Goats	Total	P.C. variation between 1940 & 1935	Per 100 of population
Hyderabad State	6,000,293	3,572,586	9,572,879	+ 2.8	66.3
Madras ..	14,407,271	7,967,894	22,375,165	+ 19.7	48.0
Bombay ..	2,097,486	2,854,697	4,952,183	+ 30.7	22.7
C.P. & Berar (1935-36)	423,187	1,852,622	2,275,809	+ 43.6	14.7

44. The number of horses and ponies enumerated, Horses & Ponies. dropped by nearly 20 per cent.

Class	1349 F. (1940)	1344 F. (1935)
Horses ..	45,145	68,914
Mares ..	50,615	70,102
Young stock ..	41,365	31,311
Total ..	137,123	170,327

It is striking that the number of young stock has increased by 32 per cent. The advent of motor vehicles in increasing numbers is the cause of the fall in the number of horses and ponies.

There is, however, still need for these animals in the districts little served by road and rail communications. As beasts of burden country ponies have a place. (Table No. 11).

Mules
Donkeys
& Camels.

45. A greater number of mules are found in the cities of Hyderabad and Aurangabad, in the service of the Army. The remaining are distributed in small numbers in the other districts.

Class		1849 F. (1940)	1844 F. (1935)
Mules	..	700	1,598
Donkeys	..	72,972	86,883
Camels	..	1,386	1,459

Donkeys show a decrease of 16.0 per cent. upon the last census figures. Dhobies and Banjaras employ them as pack animals. Mules and donkeys are able to subsist on harsh or meagre forage, which together with their docility of temperament and sureness of foot, makes them valuable in dry countries and especially those countries that are rough and mountainous. Under such conditions their ability to outgo the horse is proverbial.

Camels are very largely found in Marathwara districts. Nander has 554, Bidar 524 and Gulbarga 120. The remaining is shared by the other districts; Hyderabad City has only 23.

Pigs.

46. At the instance of Government of India, pigs were censused this time in the Dominions as elsewhere. The total number was 199,414. Pigs are largely found in Telingana districts. Warangal has 59,455 and Nalgonda 27,815. In Marathwara only 21.1 per cent. of pigs are found. World's total number of pigs or swine in 1917 was 162,800,000 heads. Swine production is affected more directly by economic than by climatic conditions. The omnivorous feeding habits of the animals makes it a suitable means for converting household and dairy waste as well as surplus grain and biproducts into meat. Of

HORSES
WORLD TOTAL IN 1917 A.D
1,05400,000 HEAD

all the live-stock it is the fastest machinery that converts the vegetable waste into flesh. (Talukwari details are given in the table No. 56).

47. This is also a fresh introduction in the live-stock Poultry. census of 1940. On account of its importance a separate chapter is given in this report to poultry.

48. These being very costly machines and their spare Tractors. parts not being available easily and cheaply they are going out of use. The number enumerated in this census was 24. These too are mostly on the Government Farms or other Government Departments.

49. The total number of ploughs being 1,327,817 as Ploughs. compared with 1,390,054 in the preceding quinquennium. Of the total, 1,261,193 are wooden and 66,624 iron.

The wooden plough shows a decrease of 5.4 per cent. and iron an increase of 16.6 per cent. since 1344 F. The use of improved types of plough is being encouraged by Government and wherever the holdings are large and the soil deep and stiff iron plough is employed now. The advantage of iron plough is being increasingly realised by the cultivators.

As per table No. 3 appended, in the case of ploughs Nalgonda easily leads with 18 per 100 of population, Warangal taking the second place with 14, Mahbubnagar 13 and Medak 12. The land in Telingana is fragmented in such small plots that a larger number of ploughs is owned by agriculturists. The size of holding in Marathwara is larger and the black soil is soft and animals of the tract strong and massive, therefore, the number of ploughs is small, ranging between 10 in Nander and Bidar and 2 in Bir and Osmanabad per 100 of population.

The average area per plough is 20 acres in Hyderabad, 7.4 in Madras, 22 in Bombay and 14.5 in C.P.

Provinces	Wooden ploughs	Iron ploughs	Net area sown in acres	Average area cultivated per plough
Hyderabad State ..	1,261,193	66,624	27,054,142	20.0
Madras ..	4,167,946	57,060	31,379,843	7.4
Bombay ..	1,221,569	84,804	28,779,649	22.0
C.P. and Berar ..	1,639,517	38,765	24,369,333	14.5

Next to Bombay, Hyderabad has the largest number of iron ploughs. Aurangabad alone has 21,359 and Bir 12,921 iron ploughs. (Tables No. 12 and 13).

Carts.

50. Over the last quinquennium census the number of carts have decreased by 13.0 per cent. The causes may be attributed to the detail enumeration this time leaving out the unserviceable carts ; and also to the Railway Bus Service all over the State. For comparison the following table may be seen :—

Provinces	NUMBER OF CARTS		P.C. of variation between 1940 & 1935	
	1940 1349 F.	1935 1344 F.		
Hyderabad State ..	561,417	645,112	—	13.0
Madras	1,241,424	1,193,665	+	4.0
Bombay	703,960	678,327	+	3.8
C.P. and Berar ..	1,166,505	1,083,850	+	7.6

The largest number of carts was found in Karimnagar (63,611). The other important districts were Adilabad 57,134, Warangal 45,863 and Aurangabad 43,760 (table No. 14).

As per table No. 3 appended in the case of carts per 100 of population, Adilabad has a larger number of carts (8) than any other district. The population there is less and the communication between villages across hills and forests is so extensive, rugged and tortuous that country carts, however crude are required as the only means of conveyance.

Sugar-cane
Crushers.

51. Since the establishment of the Sugar Factory in Bodhan (Nizamabad) the cultivation of cane made a rapid expansion in Medak and Nizamabad districts. In remote places where gur-making is done by old methods wooden crushers are still employed. Iron roller crushers are increasing. Some are power driven and some driven by bullock power. The area in these Dominions represent about 1 per cent. of the area under cane in India and the weight of cane cultivated in 1349 F. approximated 989,603 tons.

A comparison of the sugar-cane crushers with the neighbouring Provinces is as follows :—

Provinces	CRUSHERS POWER DRIVEN		CRUSHERS BULLOCK DRIVEN		ACREAGE UNDER SUGAR- CANE		AVERAGE ACREAGE PER CRUSHER	
	1940	1935	1940	1935	1940	1935	1940	1935
Hyderabad State.	408	108	6,759	8,065	36,102	50,580	5.0	6.2
Madras ..	556	1,524	24,496	24,227	132,000	122,000	5.4	4.7
Bombay ..	654	615	10,128	9,760	129,000	112,000	12.0	10.7
C.P. & Berar	68	..	5,687	..	30,000	28,000	5.2	..

Marathwara commands 66.7 per cent. of the total sugar-cane area of the State. All the canes grown are crushed locally for gur. Of the power mills, 227 are working in Telingana and only 181 in Marathwara. Bidar is the largest gur-centre where as many as 1,034 bullock power mills are at work. Details are given in table No. 15. In Telingana, Nizamabad is the largest sugar-cane centre. There are 2,031 crushers worked by bullocks. Compared to the last census of 1935 it seems that most of the districts have enumerated less number of mills in 1940. Appreciable increase is in Nizamabad district. The others that show some increase are Warangal, Karimnagar, Adilabad, Mahbubnagar and Osmanabad.

52. This is also a new introduction in 1940 census. The total number of these decorticators in the State is 1,144 of these as many as 809 are found in Gulbarga Subah alone. Details can be seen from the talukwari table No. 54. Groundnut decorticators

53. It is a new item. The number enumerated is 752 for the Dominions. Hay presses.

54. A new item. The number enumerated is 359. Hay mowers.

55. A new item. The number enumerated is 1,998. These are increasing regularly. Chaff cutters.

56. A new item. The number enumerated is 1,331. It is a new introduction into the State. Rahats.

Pumping-sets.

57. For irrigation purposes there are 604 oil engine pumps, 179 electric pumps and 738 hand pumps in these Dominions. They are regularly increasing.

Provinces	OIL ENGINES & PUMPS		ELECTRIC PUMPS		HAND PUMPS	
	1940	1935	1940	1935	1940	1935
Hyderabad State ..	604	416	179	11	738	65
Madras ..	3,286	3,695	2,374	901
Bombay ..	2,723	1,459	443	142
C.P. and Berar ..	326	..	91

Oil ghanis.

58. A new item in this census. In the last population census the number of oil ghanis was 6,349. In this census the number has gone up to 11,235. Talukwari details are in table No. 54.

Dairy establishments.

59. A new item in this census. In the last population census the number of dairy establishments was 73 only. In this census the number has gone up to 675.

Smithy workshops.

60. A new item in this census. In the last population census the number of smithies was 2,072. In this census the number has gone up to 12,104.

Carpentry shops.

61. A new item in this census. In the last population census the number of carpentry shops was 5,284. In this census the number enumerated was 19,414.

Potteries

62. A new item in this census. In the last population census the number of potteries was 4,969. In this census the number has gone up to 22,320, i.e., nearly one for each village.

•

CHAPTER III.

BREEDS OF LIVE-STOCK.

63. Please refer to the Live-stock Census Report for 1344 F. (1935) for full details.
-

CHAPTER IV.

LIVE-STOCK BREEDING, FEEDING, HOUSING, ETC.

Cattle
breeding.

64. According to the population census of 1931 there are as many as 57,460 persons who are directly engaged in cattle breeding. For districtwise details table No. 57 of 1935 Live-stock Census Report may be seen.

Lambadas, Banjaras and Gondas are known to be large scale cattle breeders. Living, as they do, in extensive forest clearings, they have ample scope for continuing their hereditary profession in their own traditional ways, regardless of evils of defective breeding. They have no proper arrangements of preventing coverings by weaklings or inferior bulls.

Government have also taken interest in this matter and have posted good stud bulls for free service in large size villages. In 1348 F. Amrabad had 8 Amruthmahal bulls, Nizamabad 15, Udgir taluk 4, Aurangabad 5, Medak 2, and Warangal 2. Brahmani bulls, dedicated to deities and to deceased members of families, are also left for service in rural areas. They graze freely, are fed charitably and serve locally. In Urban areas professional Gowlis keep service bulls. They are put to restricted use as in towns and cities. Breeding farms are few and the owners would not let others avail of their services except on payment and that too, to a limited extent.

Except some large professional breeders (Lambadas) in all cases of such private breeding no scientific principles are followed and selection is rare.

There is a very big scope of improvement in the breeds of animals and Hyderabad State can command all the cattle markets of the Deccan including Bombay and Madras Presidencies and Central Provinces both for milk as well as plough animals.

At Himayatsagar, the Government Cattle Breeding and Dairy Farm is fully equipped on modern lines and serves a useful purpose of training people the art of breeding and dairying. It specialises in Malvi breed. The Hingoli Stud Farm concentrates upon Deoni types.

Amruthmahal bulls are improving the stock in Amrabad taluk.

65. Sheep and goats were in origin native to rough uplands and dry plateaus. Their wild relatives are now found in the most inaccessible mountains. When bred upon moist low lands particularly such as lack of drainage, these animals are subject to footrot and parasitic diseases. Sheep are raised for their wool, for their flesh and in certain regions for their milk. The wool industry as carried on in parts of the world is an extensive type of agriculture. Of the fine wool sheep the best known is Marino which originated and developed in Spain by the Moors. In warmer climate the wool naturally grows less itself.

Goats like sheep are at home in dry lands or mountainous regions where forage is scanty and fibrous. Angora goat is native of Asia Minor and is kept chiefly for its fine hair called Mohair. With the exception of Angora, the goat has a relatively valueless coat and is produced for its flesh, its skins and its milk. Throughout the cities and villages of Spain the goats are daily milked before the door of the consumer as it is the case of buffaloes in Hyderabad. India ranks first in number of goats.

66. According to the last population census 330,949 persons in the State are herdsmen and shepherds. Dhangars are the professional sheep breeders. They carry on their profession along old lines. They care little for the selection of good type either for wool or for mutton; number being their primary consideration. The village flocks of sheep and goats are maintained chiefly for mutton and scant attention is paid to improve their milking capacity or wool. 4 to 5 rams are kept for every 100 breeding ewes. The mating season is immediately after the break of the monsoon and the period of gestation is 146 days. Lambing season is at the beginning of cold weather: The lambs at birth weigh 4 to 6 lbs. Sheep breeding is largely carried on more in Telingana where extensive forests are found. In Marathwara, absence of verdure during a large part of the year, makes it difficult for a breeder to maintain a flock. In these Dominions, it is a common practice to manure fields by hurdling flocks of sheep and goats, for a few nights each season. The sheep enrich the soil by their droppings and urine. The shepherds receive a fee for such service,

Sheep and
goat breed
ing.

67. The district of Osmanabad in general and Nalegaon village of Perinda taluka in particular, and talukas of Nilanga and Ahmadpur (Bidar district) are noted for their good milking goats and good breeding of he-goats are kept for breeding. They give as much as 3 lbs. of milk a day. In villages they are the poor men's sole property. Milking goats are generally short haired and fetch Rs. 12 to 15 each. In rural areas it costs little or nothing for feeding the sheep and goats. From morning till evening they are on the move picking anything they could reach.

Goat's milk is known to be good for growing children and tubercular patients in particular. Experimental work with regard to breeding of Bikaner sheep was continued at the Hingoli Farm.

The measurement of good, mature sheep and goat is as follows :—

Details	Ram	Breeding Ewe	He-goat	She-goat
Height in inches (behind withers)	25	25	31	28
Girth in inches	30	28	33	31
Length in inches (part of shoulder to end of buttocks)	28	26	31	29
Weight in lbs. . . .	50 to 60	45 to 50	55	45

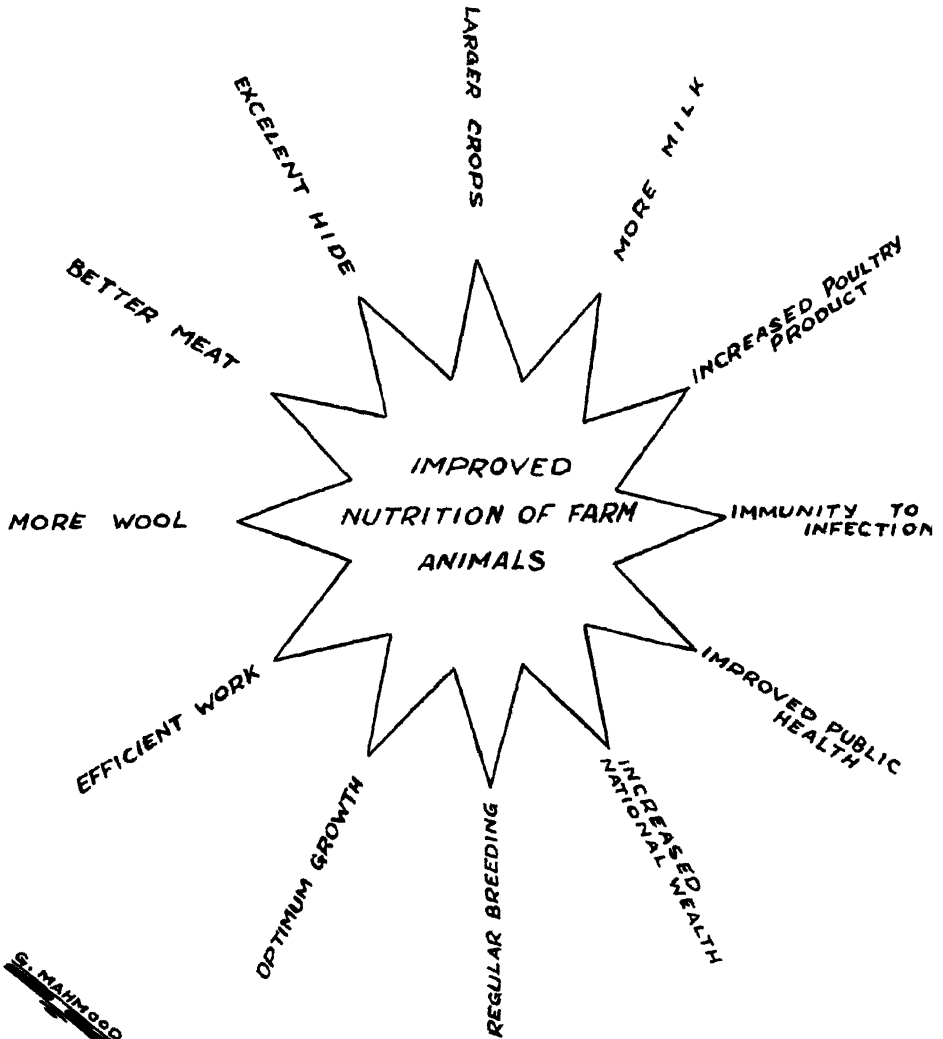

Horse
breeding.

68. The Government, through the Veterinary Department, had distributed mares by way of taccavi in some of the Talukas over 25 years ago, and now most of the mares served are those belonging to private owners. Government keeps stallions in those tracts under the care of the Tahsildars in order to serve freely the brood mares. Every year the results are ascertained and the number of stallions is increased, if necessary. The number of stallions kept for this purpose is shown in table No. 17. Mules were once bred for the military purposes but stopped now. Breeding of other animals such as donkeys, camels and pigs is left to nature.

Feeding.

69. Live-stock feeding and grazing depends to a very great extent on the annual rainfall in the country. Rainfall was generally well above normal in 1345 F. and 1348 F. while in the other three years some districts had less

*FUNDAMENTAL IMPORTANCE OF ANIMAL
NUTRITION IN NATIONAL PROSPERITY*

During the quinquennium rainfall was deficient, once in Warangal, Karimnagar, Adilabad, Nizamabad and Mahbubnagar and twice in Medak and Nalgonda and thrice in Baghat. In Marathwara it was once in Aurangabad, Nander, Parbhani and Bidar, twice in Raichur and thrice in Bir, Gulbarga and Osmanabad. In parts of three districts water and fodder supply was inadequate. Special mention may be made of the scarcity in 1348-1349 F. in Karimnagar and Adilabad. Government realising the needs of cattle in the affected areas made prompt arrangements for the supply of a large stock of fodder to them.

Animals find pasture in fields after harvest. They also graze on current fallows. Cultivators in Marathwara generally graze their animals on the broad boundary lines between fields. It is also a practice in these areas to accommodate bullocks in mid-field during crop season and feed them with stunted and sterile plants and other weed and herbiage which may grow in the field and along water courses. The stubble of crops is also available.

70. The old ruling that twenty-five per cent. of the aggregate area of each village should be set apart for grazing purposes for the village cattle was modified to 10-15 per cent. Even this small margin is not available in certain areas owing to the steady expansion of cultivation.

The districts where good grazing is found are mostly those that have large forest areas or brush-wood jungles and Ramnas. They are Udgir, Ahmadpur in Bidar District, Amrabad in Mahbubnagar; Devarkonda in Nalgonda; Nizamabad in Nizamabad District; Mulag, Pakhal and Paloncha in Warangal District; Mahadeopur in Karimnagar District and the whole of Adilabad District.

In these places tanks, rivers and streams add to the fertility of the soil and pasturage. Herds of cattle migrate to these parts from the neighbouring tracts not only of the Dominions but also of British India during summer season for grazing.

Table No. 19 shows the extent of forest land open to cattle grazing.

71. Government charges a fee on each holding, which like the Local Fund Cess, has been fixed with reference to the land revenue assessment on each holding at so many pies in the rupee. This rate at present varies from 1 to 6 pies in the rupee according to the extent of grazing

Bancharai
Cess.

available. One anna per sheep and two annas per goat is the grazing fee collected by the Forest Department for grazing the flock from March to June in the forest areas.

Quarter anna per sheep and one anna per goat is the grazing fee collected by the Revenue Department for grazing the flock on the Parampoke (Government) lands. This is collected by village Patels.

Shepherds also take accacia trees (babool) on lease at the rate of four annas to one rupee per tree for feeding goats with the leaves and pods.

Table No. 18 shows the number of animals grazed and the grazing revenue realised.

Food &
fodder.

72. Generally the straw of all the food grains is utilised as fodder, *e.g.*, straw of rice, wheat, barley and small millets, kadbi or jawar, maize and bajra.

In Telingana luxuriant grass grows during the rainy season. This is cut and preserved for use as fodder at the rate of Rs. 10 per cart-load or Rs. 5 per 1,000 sheaves. It is supplied from forest areas by Forest Department in large quantities during famines.

Parts of Marathwara such as Parbhani, Aurangabad and Bir districts there are natural pastures with some of the best grasses in the Dominions such as Sedah, Pouna, Marvel, and Surwala.

Cultivators who cannot get sufficient fodder grow fodder crops such as fodder jawar, maize, lucerne and guinea-grass under wells for the maintenance of their animals.

A list of chief fodder crops of the Hyderabad Dominions is given below:—

1. Grasses—The best are Sedah (*Ischoemum Sulcatum*), Surwala (*Andropogon Contortus*), Marvel and Pouna.
2. Jawar Kadbi—(*Sorgham Vulgare*).
3. Fodder Jawars (*Sorghams*).
4. Maize Kadbi (*Zeamays*).
5. Bajra Kadbi (*Pennisetum Typhoideum*).
6. Sawan Straw (*Panicum Milliaceum*).
7. Paddy straw (*Oryza sativa*).
8. Lachna or Ragi straw (*Elusine Coracana*).
9. Rala or Kangani straw (*Setaria Italica*).
10. Wheat straw (*Triticum Sativum*).
11. Barley straw (*Hordeum Vulgare*).

12. Lucerne (*Medicago Sativa*).
13. Guinea-grass (*Panicum Maximum*).
14. Oats straw (*Avena Sativa*).

In certain classes of food and fodder Hyderabad is self-contained. The imports though steadily advancing in quantity and value as will be seen from the following statement, still the exports are greater.

Years	IMPORT		EXPORT	
	Quantity in mds.	Value in O.S. Rs.	Quantity in mds.	Value in O.S. Rs.
1848 F. (1938-39) ..	44,655	98,359	75,647	1,01,568
1847 F. (1937-38) ..	41,590	94,036	59,023	1,03,426
1846 F. (1936-37) ..	34,485	78,535	83,634	1,06,786
1845 F. (1935-36) ..	26,816	84,697	124,868	1,37,393
1844 F. (1934-35) ..	38,934	76,921	155,334	1,29,008

73. Besides Kadbi, grass or straw there are some other classes of food necessary for the cattle. These are also found in the Dominions, *e.g.*, Concentrated food.

1. Cotton seed (*Gossypium*) known as sarki Binola.
2. Bengal gram (*Cicer arietinum*) known as Chena.
3. Horse gram (*dolichos biflorus*) known as Kulthi.
4. Husk of tuar pulse—Pigeon pea (*Cajanus indicus*) known as Chunni.
5. Husk of lentils (*lens esculanta*) known as Masur.
6. Green gram (*Phaseolus Mungo*) known as Mung.
7. Paddy husk (*Oryza sativa*) known as Chootik.
8. Rice husk (*Oryza sativa*) known as Konda.
9. Wheat husk (*Triticum sativum*) known as Bhoosa.
10. Oil-cake from safflower (*Carthamus tinctorious*) known as Karar Khalli.
11. Oil-cake from til (*sesumum indicum*) known as Till Khalli.
12. Oil-cake of groundnut (*Arachis hypogoea*) known as Bhoi Mung Khalli.

Concentrated food to the milch animals is given in proportion to the amount of milk per day. Generally it is one pound for a pound of milk. Animals giving 10 lbs. of milk per day are given a sumptuous supply of 10 lbs. The concentrates are composed of cotton seed and gram husk (chunni), konda (rice husk) bhoosa (wheat husk). Gram is sometimes mixed. The working animals generally get oil-cakes when at work.

Horses get Bengal gram throughout the year and some give boiled kulthi (horse gram) during the cold weather. The amount varies according to the size of the animal. A horse 13 hands gets 6 lbs. of soaked gram in the morning and 6 lbs. in the evening besides lucerne and hay.

Water-
supply.

74. In Hyderabad State there is a sufficient supply of water in general. Over large tracts, tanks, ponds, rivers and wells provide facilities for the cattle.

The cattle are washed and watered from the same sources.

Shelter.

75. Among the live-stock only the working and milking animals, horses and mules are provided with shelter in the shape of sheds. The old fear of cattle theft has made it a practice in some parts that the owners keep the animals tethered within their court-yard in close proximity to their living rooms. In other parts animals are usually tied or left in the open yards. They are exposed to sun, rain, cold and other inclemencies of the weather. Lack of shelter and proper care for the cattle are the chief causes of diseases that afflict the cattle at some time or other of the year.

Divisions	40 YEARS' ANNUAL AVERAGE OF RAINFALL ETC.

MORTALITY FROM CONTAGIOUS DISEASES

IN THOUSANDS 1340 TO 1349 F. (1930-31 TO 1939-40)

MORTALITY FROM INFECTIOUS DISEASES IN RELATION TO PREVENTIVE INOCULATION

LAKHS

1340 TO 1349 F. (1930-31 TO 1939-40)

76. For the registration of cattle mortality from diseases and other causes patwaris are provided with registers in all the villages. Reporting of such occurrences is not strictly observed and failure to report them does not involve penalty to the defaulter. Therefore, the figures exhibited in the statements following this Chapter should be taken with reserve. Cattle mortality.

From the talukwari reports received weekly it appears that the contagious diseases are prevalent in some part or other of the Dominions throughout the year. In parts of Telingana, diseases are usually more common than in the drier regions of Marathwara. A larger cattle population is supported by Telingana and consequently, diseases take a heavy toll there. Diseases among cattle are generally attributed by the villages to the periodical visitation of the village goddess, *Pochamma*, and the rural population generally perform pujas and sacrificial offerings but intelligent ones seek veterinary aid.

77. Table No 22 gives the five-year figures of various types of animal and annual average mortality due to contagious diseases. During the rainy and cold weather, cattle diseases prevail in various parts of the State and exact a heavy toll. The chief disease among bovine animals which sweep away like plague is Rinderpest (Bararoug). The others of comparatively less occurrence are Hamorrhagic Septicæmia (Gall gout), Blackquarters (Zaharabad), Anthrax (Gilti) and Foot and Mouth disease (Mook-Khor). Cattl mortality due to disease.

The results of the preventive inoculation carried on by the Veterinary Department during the period and the number treated by the Department and number of their hospitals and staff are shown in tables Nos. 24, 25, and 27.

The veterinary officers performed 224,411 inoculations in 1349 F. against 181,943 in the preceding year. The largest number was 45,877 in Karimnagar. In Warangal 138,374 animals were submitted to preventive inoculations. The Department treated in the hospitals and dispensaries and through the itinerating staff 342,752 cases in 1349 F. as compared with 329,735 in 1348 F. (Table No. 25). The largest number of patients in 1348F.

came from the cattle in the Hyderabad City (48,637) and Atrai-i-Balda produced 23,709 cases. In Marathwara 170,472 cases were treated representing one-half of the total number in 1349 F. in the Dominions. The Department maintained 107 hospitals and dispensaries staffed by 113 officers. (Table No. 27).

Slaughter
for mutton

78. The class of people who are by profession butchers are found in all the villages of the Dominions. As regards slaughter of animals for human consumption taking 20 lbs. as the weight of meat and bone per animal (sheep and goat) per capita consumption is $\frac{47,585 \times 12 \times 20}{1,62,00,000}$ i.e., 0.7 lbs. per annum. More animals are slaughtered in winter than in summer. The proportion of sheep and goats slaughtered is 100 to 111. Usually all the animals that are slaughtered in the slaughter-houses (Kamala or Maslakh) are registered. In the Cantonment area it has been the practice that all the animals that are slaughtered privately on occasions of festivals, Ids and Pujas are also recorded in the register, while in other places there is no record kept of the animals slaughtered in times of festival. It cannot, therefore, be ascertained definitely in what months of the year animals are slaughtered in a greater number than in the other months or how many are used in times of festivals or marriage ceremonies and especially during Bakr-Id or the Kali Mata's Puja.

According to returns received from 117 slaughter-houses 801,049 animals of which 592,449 were goats and 117,354 sheep were slaughtered in 1349 F. as compared with 323,169 animals of which 105,213 were goats and 158,456 sheep in 1348 Fasli when there were 94 slaughter-houses in the Dominions.

In addition 57,229 bulls, cows and calves were slaughtered in 1348 F. as against 54,572 in the previous year. For Hindu festivals 906 buffaloes were killed in 1348 F. as compared with 1,798 in 1347 F. Districtwari details are given in table No. 23. As per the Report of the Marketing Officer on Cattle Mortality the estimated number of oxen slaughtered annually is 150,000 for the Dominions. The buffaloes are not slaughtered for consumption anywhere in the Dominions but on festival occasions and its beef is given to the Dhers and Chamars. As per his report

*NO: OF ANIMALS SLAUGHTERED ANNUALLY
IN HYDERABAD STATE*

the number of oxen, sheep and goats slaughtered in the Dominions on an average of 5 years (1340-44 F.) is :—

Place	OXEN		SHEEP AND GOATS		
	Monthly	Annual	Daily	Monthly	Annual
1. Hyderabad City ..	824	9,659	445 626	13,523 19,052	6
2. Secunderabad ..	644	7,901	270	8,276	..
3. Aurangabad Cantt.	64	706	19	568	22
4. 13 Municipal Towns of the State.	973	11,671	63 139	1,923 4,243
Dominions	1,564	47,585	28

CHAPTER IV.

TRADING AND INDUSTRIES PERTAINING TO LIVE-STOCK.

**Cattle fairs
and
bazaars**

79. There are in these Dominions 222 weekly and 52 seasonal cattle bazaars and fairs (see table No. 28 for details). The important ones are Deoni, Kurmurti, Pattan, Sangni, Srirangapur, Gadwal, Qandhar, Wanparthi, Jalhalli, Mangal, Umri and Malegaon. The cattle bazaars and fairs are distributed as follows :—

Telingana	Weekly 47	Seasonal 27	Marathwara	Weekly 175	Seasonal 25
City, Baghat and Atraf-i-Balda	2	..	Aurangabad	41	1
Warangal	3	Bir ..	21	..
Karimnagar ..	2	7	Nander ..	23	3
Adilabad ..	7	1	Parbhani ..	17	6
Medak ..	22	2	Gulbarga ..	23	3
Nizamabad ..	11	3	Osmanabad	26	1
Mahbubnagar ..	3	8	Raichur ..	6	9
Nalgonda	3	Bidar ..	18	2
			Hyderabad State.	222	52

80. The balance of trade in live-stock is generally in favour of the State. A large export trade is carried on with the neighbouring Provinces of British, while the import is comparatively small. More sheep are exported than goats. The export is greater in the months of April to July than in the remaining months. Many of the animals exported from these Dominions go to Bombay by road; the movement taking place during the summer. It is cheaper to send flocks in charge of shepherds by road than to rail them.

IMPORT & EXPORT VALUE OF LIVE STOCK IN H.E.H. THE NIZAM'S DOMINIONS FROM 1335 TO 1349 F.

LAKHS OF RS:

(a) Cost of transport for 100 miles by road of 200 to 300 sheep or goats is as follows :—

	Rs.	a.	p.
3 men at Rs. 3 each per trip to and fro ..	9	0	0
Feeding 3 annas per person per trip for 3 men ..	0	9	0
Grazing charge ..	3	0	0
Miscellaneous expenses ..	2	0	0
	14	9	0

(b) Railway freight for a wagon to carry 75 sheep or goats for 100 miles=B.G. Rs. 15 (two attendants are allowed free passage).

(c) A Broad-gauge railway truck can hold 10 she-buffaloes (or oxen) without calves or 8 she-buffaloes with calves. A Meter-gauge railway truck can hold 6 she-buffaloes (oxen) without calves or 4 she-buffaloes with calves. The former charges 4 annas per mile and the latter $3\frac{1}{2}$ annas per mile. From the figures shown in table No. 29 and the graph attached it is clear that while import has steadily diminished, export is advancing of horned cattle, sheep and goats. The import value of live-stock dropped from Rs. 32.2 lakhs in 1335 F. to Rs. 15.5 lakhs in 1349 F. Lingsugur (Raichur) is the largest importer followed by Aurangabad and Bir. The export value of live-stock improved from Rs. 32.4 lakhs in 1335 F. to Rs. 39.8 lakhs in 1349 F. Aurangabad is the chief export centre where from Rs. 8.9 lakhs in 1335 F., the value increased to Rs. 13.2 lakhs in 1349 F. Bir has shown a phenomenal rise from Rs. 35 thousand in 1335 F. to Rs. 7.3 lakhs in 1349 F., Gulbarga from Rs. 6 thousand to Rs. 3.4 lakhs in the same period. The number and values of imports and exports are given in table No. 29 while the flow of trade, mashulkhanawari is indicated in tables No. 30 and 31.

In the present census the prices of animals were ascertained and the averages are exhibited in table No. 32. In villages sheep and goats are sold to butchers in Khandis of 20 heads each.

Skins &
Hides.

81. H.E.H. the Nizam's Dominions is very important in India in the skin and hide trade. Import trade of it as in the case of animals is declining, from Rs. 7.2 lakhs in 1335 F. to Rs. 5.1 lakhs in 1349 F. Secunderabad, Hyderabad and Warangal are the largest importers, the value ranging between one lakh and two lakhs of rupees. They receive goods from the adjoining Provinces through the agents of wholesalers in these areas for re-export to Madras (Table No. 33). The exports of leather, hides and skins improved from Rs. 42.6 lakhs in 1335 F. to Rs. 45.9 lakhs in 1337 F. Thereafter, there was a steady drop to Rs. 22.9 lakhs in 1340 F. From then the trade improved to Rs. 54.3 lakhs in 1348 F. Owing to war and lack of shipping facilities the export slumped to Rs. 40 lakhs in 1349 F. (Table No. 34).

82. The hides of dead animals are made use of by the village chamars or shoe-makers. They are tanned in their own way and converted into chappals, water-lifts (water-buckets and tandam) and collars of the draught animals. Hides and skins of good quality are collected in the villages, salted or dried and sold in the week bazaars or to wholesalers. More skins and hides of dead animals are available in the months following the monsoon as more diseases are prevalent during the monsoon. Hide and skin marketing survey revealed that the annual supply of oxen hides in the State aggregate 14.5 lakhs of pieces (*i.e.*, equal to 116 lakhs of lbs. dry) of which only one-tenth is obtained from slaughtered animals and the rest from dead animals :

	Pieces
Dead animals	.. 13,00,000
Slaughtered	.. 1,50,000
Total	.. 14,50,000

The weight of ox-hide varies from 18 to 24 lbs. Deoni. ox-hide is 24 lbs. Average for the Dominions is 18 lbs. in raw green state and 8 lbs. dry.

Estimated annual supply of buffalo hides is 2 lakhs of pieces, average weight of buffalo hide in raw green state is 25 lbs. and dry 10 lbs.

83. The number of skins (sheep and goat) available annually in Hyderabad State-in Hyderabad City 6 lakhs, Districts 22 lakhs, and dead animals 6 lakhs, total 34 lakhs. The weight of raw green sheep skin with wool is about 3 lbs. and the weight of tanned sheep skin is half a lb. The weight of raw green goat skin is also 3 lbs. and the weight of tanned goat skin is $\frac{4}{5}$ lb.

84. The marketing survey also revealed that the process of flaying and tanning in both cases of hides and skins is of the most primitive order and inevitably reduced the market value.

All the raw materials necessary for tanning are found in great abundance in these Dominions for tanning and curing. It is only the lack of knowledge and unscientific methods that compels the traders to have the raw hides and skins for export although they are difficult to handle and occupy more wagon space. Despite the inconveniences involved in handling, the foreign importers want them raw simply because the curing methods in India are defective.

Tanning statistics of Hyderabad State per annum are:

Hides by village chamars and		
dhers. = 6,00,000 = 36,00,000 lbs.
Hides by tanneries (big and		
small) = 10,25,000 = 82,00,000 lbs.
Skins by village chamars and		
dhers = 16,000
Skins by large tanneries	.. = 29,60,000	} = 19,34,400 lbs.

Half tanned and fully tanned hides used for agricultural and other purposes in Hyderabad State :—

Chappals	500,000	Hides
Collars for draught animals	80,000	„
Tandams or leather trunks of				
Moats	20,000	„
Total	600,000	„

After export the remaining 733,192 hides and 711,000 skins are used by *mochis* for boot and shoes and other leather goods. The cost of tanning a hide works out to Rs. 2-5-0 a piece.

The stuff prepared by the tanned and half tanned skins and hides in Hyderabad State is :—

Boots, shoes, gurgabis for police, customs and forest departments, chapps, moats, trunks, pakhals, leather buckets, bullock collars. The water-bags turned out in the district of Bir called chagals are of fine and artistic design. In the same way the footwears prepared in Raichur Town are quite good.

Cotton gins require hides for their rollers. The estimated expenses are 5 annas per bale of cotton. Therefore for 5 lakhs of bales it will be Rs. 1,60,000. The leather belting required for the factories is besides it and the cost of which is half a lakh extra.

The skins are exported mainly to Madras. For export to Madras the hides and skins are tied into bundles of gunny bags. 30 hides weigh 3 maunds and 300 to 400 sheep skins weigh $2\frac{1}{2}$ to 3 maunds.

85. The price of 100 hides raw green varies from Rs. 162-7-7 to Rs. 187-6-7. The price of 100 sheep and goat skins raw green is, sheep=Rs. 59-6-0 and goat=Rs. 97-12-2. The prices of tanned skins and hides are :—

Skins	GOAT SKIN		SHEEP SKIN	
	Per skin	Per lb.	Per skin	Per lb.
1st quality ..	1 4 6	1 0 6	0 14 6	1 1 8
Singapore quality ..	0 9 10	0 9 6	0 11 6	0 12 0
Calcutta do ..	0 9 0	0 9 0	0 9 6	0 11 0

Hides			Buffalo hide per lb.	Cow hide per lb.	Calf hide per lb.
1st quality	0 5 0	0 5 8	0 12 11
Reject	0 4 8	0 6 11
Pieces	0 2 0	..

86. As there is not sufficient attention to this industry a large quantity of raw skins and hides and most of the tanning materials are exported and thus the country is deprived of the profits that will accrue from curing and selling them as tanned leather. Imports and export of leather goods manufactured are shown in table Nos. 35, 36 and 37.

87. Raw hides are classified into three categories; buffalo hides, cow hides and calf hides. The demand for cow hides is usually the largest. Germany is the principal consumer of Indian cow hides and the United Kingdom, the second largest. Indian buffalo-hides are exported to Greece and Bulgaria while goat and sheep skins go chiefly to the U.S.A. and to a lesser extent to Czechoslovakia. Indian tanned and cured hides and skins go very largely to the United Kingdom and France.

88. The wool obtained from the sheep is short and coarse and weighs 1 to 1½ lb. at each shearing. Old ewes are sheared twice a year, about the middle of March and October and the young ones are clipped only once before the hot weather sets in. Coarse blankets (Kambals) are made of sheep wool and they sell from Rs. 4 to Rs. 10 each; but if white wool is separated and woven, high prices are obtained. The wool is utilised for kambal making till the 3rd or 4th lambing and then the ewes are sold off to butchers as they are neither fit for breeding or for wool production after that age. Wool.

Warangal Town is the only place in the Dominions where wool is utilised mostly for carpet weaving. Woollen carpets of Warangal are well known. They are manufactured and exported in large quantities and they go as far as Europe. The import of wool increased from Rs. 712 in 1345 F. to Rs. 3,141 in 1349 F. while that of exports rose from Rs. 3.2 lakhs in 1345 F. to Rs. 10.5 lakhs in 1349. (Tables No. 38 and 39).

89. The places where blankets or *kambals* of country pattern are woven from sheep wool are Makhtal and Mahbubnagar talukas (Mahbubnagar district); and Kamareddi taluk (Nizamabad district). A large quantity of raw wool is exported out of Hyderabad State. It indicates the possibility of developing the cottage industry for woollen articles. An enterprise of this kind will provide employment and add to the wealth of the rural population. In certain parts of India the wool industry Blankets & Kambals.

receives from the Government of India adequate protection against foreign competition. The price of a locally made blanket was roughly the same as in 1846 F. Re. 1-10-0. In November, 1937 the local price of a German blanket was Re. 1-2-0, of an Italian Rs. 3-5-0, and of an Indian Rs. 0-12-0. They are of interest if studied comparatively with import and export of wool registered in various mashulkhanas of the State during the last fifteen years. The chief centres of exports of wool are Secunderabad, Warangal and Gulbarga. Exports of woollen articles such as kambals, etc., are given in table No. 40.

Bones.

90. Another by-product of animals is bones. Although Hyderabad is a large exporter of bones and bone-meal, the Central Provinces and Bera export large quantities to Hyderabad. Probably the local traders have depots in the adjoining Berar districts. Nearly 74 per cent. of the imports recorded in the statement came from that Province. Hyderabad usually exports bones to Madras, Mysore and Bengal—Madras taking 50 per cent. There is no regular bone-crushing industry here. Bone manure is obtained from elsewhere and supplied to horticulturists and agriculturists. No import figures separately for bones and bonemeal are recorded by the Customs Department. They are included in statement for horns, etc., but export figures for bones and bonemeal are exhibited in tables No. 41 and 42.

MISCELLANEOUS INDUSTRIES.

Horns and Hoofs.

91. Most of these articles are exported from Hyderabad State. The only use to which the horns are put to in Hyderabad is for the manufacture of pen-holders, buttons, handles for pen-knives and arms. (Tables No. 43 and 44).

Tallow industry.

92. The import of tallow in the State is as follows:—

Years	Quantity in mds.	Value in O.S. Rs.
1849F. ..	7,512	1,29,088
1848F. ..	8,419	1,04,891
1847F. ..	2,888	42,528
1846F. ..	2,609	38,998
1845F.	35,082

93. Cowbazore or what is called in India as Gai-ra aoghan or Gai-lochan is really the gall-stones found occasionally in the animals slaughtered. It is greatly exported to China through Bombay. The butchers sell it to Hakims and Banyas at the rate of Rs. 6 to 8 per tola. It is also used in India as medicine administered to children in a very small doses for the prevention of cold, etc. The size and shape of these gall-stones vary from a pea to a betel-nut. In breaking it shows a concentric rings of accretion. In Hyderabad artificial cowbazore is also sold at the rate of 6 annas per tola. The true and the artificial can be detected by rubbing the cowbazore with some moisture on a finger nail and then washing it out. If genuine the yellow stain will remain on the nail for some time.

Similar to cowbazore is another substance found occasionally in sheep and goats. It is called Paozar in Urdu and Maikarai in Telugu. It is sold at the rate of Rs. 60 to 70 per tola for exportation to Singapore and Java. It is also said to be gall-stones taking the shape of accacia seed or grass stick. The one shaped as grass stick is more costly. The butchers are the sole dealers in it. The substance is hard to touch, colour dark brown and shining. It is also used as medicine.

CHAPTER VI.

DAIRY INDUSTRY.

94. The Agriculture Marketing Adviser to the Government of India states from the point of view of milk production that some breeds of Indian cattle are very good, but the average is poor. Although India has as many milch cattle as Europe, the production of milk is only one fifth that of Europe. Compared with India, Canada produces 25 per cent. of milk but with only about 6 per cent. of the number of cattle. India's annual milk production is worth Rs. 175 crores for 74.36 crores of maunds of milk.

The chief animals on which the dairy industry depends in Hyderabad are buffaloes ; cows are only auxiliaries. Although in Marathwara the number of buffaloes is less than in Telingana, but in the former the buffaloes are kept mainly for milk. In Telingana they serve a dual purpose—work and breeding.

In Hyderabad State, except in the Government and Military Farms, dairying as an organised industry does not exist. Gowlies (cowherds) carry it on their traditional ways. In Hyderabad City, a few dairies owned by private individuals are found for the distribution and supply of milk without any scientific process.

95. The Agricultural Marketing Adviser to the Government of India in the Report on the marketing of milk in India states, "The production of milk under insanitary condition and the faulty system of distribution through petty and ignorant dealers have given a very bad name to the quality of marketing of milk and dairy products, is looked upon as a matter of national importance in other countries.

In Hyderabad City, considering the demand both for domestic and restaurant uses, it may be said that dairying has a great scope if the Public Health and Municipal Authorities would only take measures to prevent adulteration and promote hygienic principles, by licensing the dealers annually, the dairy industry will establish itself and function as efficiently as in other cities of India.

The annual quantity of milk from all the milking cows is 194,408,779 seers and from buffaloes is 508,182,252 seers, the total is 702,591,031 seers which at the rate of 5 seers per rupee amounts to Rs. 14 crores. Milk is sold in seers by weight but it is generally measured out to customers. About $1\frac{1}{2}$ maunds of milk is carried on a bicycle to a distance of 7 to 8 miles for Hyderabad City milk supply. In Jatkhas or Tongas 4 to 5 maunds are carried. Clean unadulterated milk, butter and other products are the necessities of life and consequently are in great demand. There are at work 675 large and small scale dairy establishments mainly for the supply of milk in these Dominions, 62 per cent. of them being found in Marathwara. (Table No. 45). Cream separating machines number 142 of which excepting 5, all are in Telingana. (Table No. 45). Only a few gowlis use cream separators and the skimmed milk is supplied to the tea-shops in the city of Hyderabad. In the city of Hyderabad at Bela locality 500 to 600 seers of milk is used daily for the preparation of *khova*. 75 per cent. of the total milk supply of the City of Hyderabad is used as fresh milk, 18 per cent. as curd and 7 per cent. as ghee, etc.

96. In the present census columns were introduced in the schedules for noting separately the daily average quantity of milk yield from cows, buffaloes, sheep and goats with individual owners. Although the result is not quite satisfactory in certain respects, yet it is interesting. The daily average yield of a cow is reported to be 1.4 seers and that of a buffalo 2.7 seers for the Dominions.

In villages milk is sparingly drawn for sale; owners care more for ghee and for the feeding of young stock. The demand for fresh milk is usually from travellers or officers on tour.

97. The number of milch cows enumerated is 795,756 of which 41.7 per cent. are found in Telingana and the rest in Marathwara. The largest number is 82,759 in Gulbarga, followed by 76,229 in Warangal and 72,205 in Mahbubnagar. Of the total quantity of milk estimated 1,150,193 seers per day, about 70 per cent. is accounted for by Marathwara cows, where the average yield per animal is 1.7 seers as compared with one seer in Telingana. (Table No. 46).

98. Buffaloes in milk numbered 725,912 of which 51 per cent. are found in Telingana and 49 per cent. in Marathwara. Their milking capacity is reported to be

1,933,936 seers per day or 3.3 seers in Marathwara and 2.1 seers in Telingana per animal. (Table No. 47). Thus, the total quantity of milk per day both from cows and buffaloes is recorded at 3,084,129 seers, representing 4.3 ounces per head of population (1931), 6 ozs. in Marathwara and 2.5 ozs. in Telingana.

99. The best milking period for both cows and buffaloes is September to November and the poorest is March to May.

As the number of animals kept for breeding and milk in Hyderabad State and the number of young stock under one year is known by this Census, on the basis of these figures 57 per cent. of the animals calve every year. There is besides a number of young stock that has died after calving. The proportion of death in buffalo-calves is more. Thus it may be taken that 65 per cent. of cows and 70 per cent. of the buffaloes calve every year. This gives 18 months as an average interval between calvings as a whole although it is 14 months for cows. Gawlis pay special attention to get their cows covered about the 3rd or 4th month after calving, while others are not so particular. The analysis of buffaloes milk as made in the Government Industrial Laboratory gives the following details :—

Specific gravity at 80° to 85°	..	10.27 per cent.
Total solids	..	16.52 "
Fat	7.16 "
Lactose	4.41 "
Proteids	3.93 "
Ash	0.72 "

The percentage distribution of total milk produced in Hyderabad State as stated in the report of the marketing survey is as follows :—(Vide table No. 48.)

Liquid milk	..	29.0 per cent.
Ghee	62.0 "
Butter	1.3 "
Dahi (curd)	..	4.8 "
Khowa and rabree	..	2.1 "
Ice-cream	..	0.4 "
Confectionery	..	0.2 "

100. The milk products for sale in bazaars are :—

Cream, without heating (Balai), Cream after heating (Malai), Curd fresh (Dahi chakka) and curd sour (Dahi chewa), Butter (Muska), Clarified butter (ghee), Butter-milk (Chanch or lassi), Cheese (Paneer), Condensed milk (Khowa or Rabree), Ice-cream, Milk Puff (Namish).

101. In addition to cows and buffaloes, the milk yield of sheep and goats also was ascertained. There are in these Dominions 5,980,721 female sheep and goats accounting for 201,878 seers of milk or 3.3 seers per 100 of females. (Table No. 49).

102. The milking capacity and the lactation period of the common breeds found in Hyderabad State is as follows :—

Serial No.	Breed	Lactation period	Lbs. of milk per day	Total milk for lactation period	Butter fat P.C.
1	Deoni cow ..	353	12 to 14	Lbs. 2,896	5.2
2	Marathwari cow ..	203	8 to 10	1,307	..
3	Deccani cow ..	203	2 to 4
4	Mahadeopuri cow	2 to 3
5	Deverkonda cow	2 to 3
6	Ongoli cow	10 to 12
7	Krishna Valley cow..	232	10 to 12	..	4.5
8	Malvi cows ..	289	10 to 12	..	6.0
9	Delhi she-buffalo ..	306	16 to 18	4,547	..
10	Marathwara she-buffalo.	270	10 to 12
11	Mahori she-buffalo ..	271	14 to 16
12	Deccani she-buffalo..	270	6 to 8
13	Osmanabad, Ahmad-puri and Nilanga she-goat.	180	4 to 6

One seer of pure milk yields $\frac{1}{4}$ seer of khowa. The average quantity of butter from 100 seers of milk is 8 to 9 seers, *i.e.*, 8 to 9 per cent. The milk is sold at the rate of 3 to 5 seers per rupee. Butter Re. 1 per $\frac{1}{2}$ seer to $\frac{3}{4}$ and cream Re. 1 per $\frac{3}{4}$ seer.

The export of ghee and butter is steadily improving as may be evident from table No. 50. Since 1345 F. the quantity imported dropped from 2,483 maunds to 2,158 maunds in 1349 F. while exports increased from 3,207 maunds in 1345 F. to 5,828 maunds in 1349 F.

The above noted figures show that this industry can easily be started in the State with the amount of raw material available.

The estimated quantity of condensed milk consumed in the State is one lakh of lbs. a year (average price is Re. 0-11-0 a lb.). Glaxo, Cow & Gate, Lactogen, Mellins, Allenburys and Klim brands of powdered milk consumed in Hyderabad State in one year is 35 to 40 thousand lbs. (average price Rs. 3 a lb.).

A flock of Desi fowls, mixture of all colours and sizes.

A pair of Hyderabad Aseel.
A heavy and strong breed, but poor layer.

A pair of Leghorn.
A very good laying breed, but non-sitter.

A pair of Rhodes Island Red.
A general purpose breed.

A desi hen and cock.

A flock of improved birds.

to the Government of India.*

A flock of 2,000 ducks in a concentrated area of production.

A flock of turkeys.

*Reproduced here by kind courtesy of the Agricultural Marketing Adviser
to the Government of India.*

CHAPTER VII.

POULTRY INDUSTRY.

103. At the instance of Government of India this time along with the Cattle Census, a counting of poultry was also made. Thus, it is the first census for poultry. Poultry industry is of considerable importance to the State. In the scheme of rural reconstruction poultry breeding receives as much attention as the improvement of crops and freedom from indebtedness. To encourage this industry an association under the name of "The Hyderabad Poultry Association" was established in the City of Hyderabad. An annual poultry show is a permanent institution in these Dominions. Birds of high class breed and layers are exhibited and visitors are shown the advantages of improved class of hens and cocks. In the villages, demonstrations with the similar object are held. The Government Poultry Farms at certain centres serve as neclues of improvements. Eggs of good breeds are sold at a nominal price to persons interested in the industry and advice is freely given as to the method of breeding and feeding. Simple remedies easily available in the villages are prescribed for birds during time of sickness.

104. It is interesting to note that the forests of India still contain different varieties of the jungle fowl, from which it is considered that the domestic fowl was bred out. The climate of Hyderabad State is so eminently suited to poultry keeping that this industry is carried on in villages throughout the Nizam's Dominions by the poor people belonging to all castes and creeds except the most orthodox Hindus. It is said that throughout the State it is quite likely that eggs will be available in a village but not the breed. The class of people that keep poultry in the villages is 40 per cent. of the Depressed Classes (Harijans), 40 per cent. of the Hindus and 20 per cent. of the Muslims, Christians, etc. It is the fowl which is generally kept by them for birds as well as for eggs. Poultry keeping, even if practised as a hobby in villages, is good for health and costs little. The birds also in villages are healthier with more fresh air and green herbage. People in villages give their time and attention to other

occupations and keep a few fowls as only a side line. Thus poultry keeping is practised only as a secondary industry and never as a main occupation so much so that even the beggars consider it a side line to their ancestral profession.

105. Houses are not provided by ordinary poultry keepers. Birds are usually covered at night in wicker-baskets just to make them safe from cats, dogs, jackals and snakes, and the chickens from eagles during the day. Some keep them in large earthen pots, some in mud or stone houses (more or less dungeons). The Agricultural Department and the Rural Reconstruction Centres can prepare and distribute poultry houses prepared from cheap and easily available deal-wood boxes for a few birds in each village to train and guide the villagers.

106. Generally no feeding is done to the poultry. They are expected to search out their food from dung heaps and village refuse. If the owner has some of his food left over after meal and if it cannot be used in any way then it is thrown out to his poultry. Occasionally a few grains of jawar are sprinkled in the court-yard to keep the birds attracted to the home. The quantity of food required by bird is no question. They are expected to live the life of beggars going from house to house and should be content with whatever become available to them as food and quarters.

107. The only attention the villager gives to their fowls is that they open them out in the morning, collect whatever eggs they lay and then shut them up in the evening. Nobody keeps a large number of fowls because they consider it an unreliable income due to the epidemics that sweep them all away. They only keep as many birds as they think they can manage without management. There are no regular poultry farms in the State. This inhuman treatment has made the fowls very hardy and forbearing and they seem to be quite content on their fate just as it is the case of their masters, the villagers.

The Desi fowls of mongrel type have become so hardy that they live practically on any thing and under any condition. The poultry keeper considers that the giving of any food to the fowls is not profitable. He does not realize that it is an investment which will give him profits in the shape of more eggs and chickens.

A mud poultry house.

(A stone is used to cover the entrance instead of wooden board, in this instance).

A stone house for poultry.

Earthen pot (matka) as poultry house.

Jhamp or Tapa, the basket which is used in place of poultry house.

108. Beside the common Desi fowls, Hyderabad State has the best fighting cocks the "Aseal". They were developed to such a perfection both in size and fighting qualities that they are still considered the best in world and fetch Rs. 200 per bird. Special care is required to rear their chickens as they start fighting even when small.

There is a breed of fowl that has black skin; it is called Karaknath. There is a dwarf breed also called Tenies. The other breeds of fowl kept by some fanciers are generally exotic but pure. They are White Leghorn, Rhodes Island Red, Orpington, Brahmas, Minorca.

109. Besides the fowls some persons keep other birds also such as ducks, geese, turkeys, guinea fowls, etc. In the marketing survey report it is stated that India and Burma together have one tenth of world's recorded population of fowls and excluding China they have more ducks than all the other countries of the world put together. The total number of ducks in India is 166 lakhs or 18.2 per cent. of the total world population of ducks. World figure is 912 lakhs.

110. During the present Census as many as 10,274,768 cocks and hens of all ages and 31,019 ducks were counted in the Dominions, making a total of 10,305,787 birds.

Divisions			Fowls	Ducks	Total
Telingana	7,847,822	25,966	7,873,788
Marathwara	2,426,946	5,053	2,431,999
Total			10,274,768	31,019	10,305,787

The above statement shows that Telingana is more keen in poultry keeping than Marathwara. It also shows that while in Telingana there is roughly one fowl for every person, in Marathwara 3 persons own a fowl. It is generally considered that rice is a wholesome food for fowls and ducks. They feed on jawar as well but jawar without a change causes stomach troubles. Birds which thrive on paddy are less susceptible to diseases. They grow quickly and egg laying capacity is heightened. The Telingana

people in general use these birds more than the Marathwaras. It is for these apparent reasons there is in Telingana a large flock of birds representing 76 per cent. of the total. Details of Census figures are given in table No. 51.

Nalgonda, Warangal, Mahbubnagar and Karimnagar are the principal centres of poultry industry in Telingana. In Marathwara, Gulbarga (744,740), Raichur (451,810) are the chief centres for fowls. Gulbarga (1,100) and Aurangabad (946) are good centres of ducks in Marathwara.

From the above referred table it is also evident that 84 per cent. of ducks are found in Telingana. Villages along water courses and localities which abound in tanks and ponds are ideal places for breeding ducks. It is striking that as many as 5,640 birds were enumerated in Hyderabad City as against three thousand each in Atrafi-Balda, Warangal, and Medak. Hyderabad City is not only a breeding centre but also a large consuming centre. This being the first attempt there was speculation in the City and elsewhere whether Government was going to levy a tax on domestic birds. People were reluctant to disclose the exact number. As for the Poultry survey report the average number of fowls found in a village in Hyderabad State was 626 birds. The number of persons keeping poultry in a village was 45 and the number of fowls per keeper was 14.

111. A large trade in poultry is carried on in the State. The trade is both for birds and eggs; so the birds kept for breeding should be a dual purpose animal. The country or Dasi fowl is poor in both the qualities; the aseal is good as a table bird but poor in laying. The white leg-horns, though good layers, are poor in flesh and are bad sitters. The Rhodes Island Red and the Black minorcas are the only two breeds that can be crossed with the country fowl for getting the qualities required *i.e.*, good flesh, good layers, good sitters and strong and hardy constitution. In 1348 F. birds 1,223 valued at Rs. 1,696 were imported against 665 for Rs. 1,638 in the previous year, whereas in the same year 8.22 lakhs of birds were reported for a declared value of Rs. 3.62 lakhs as compared with 10.4 lakhs of birds for Rs. 4.58 in 1347 F. The chief exporting stations for fowls are Raichur, Yadgir, Narayanpet, Vicarabad and Hyderabad. The exports are mainly to Bombay. Fowls are exported in bamboo or wicker-baskets each containing 40 birds on an average.

Baskets fitted with rope-netting, in which fowls are carried as shoulder loads.
Two such baskets are attached to the ends of a pole, which is placed on
shoulders, the baskets hanging on both sides.

Man carrying fowls.

The standard size of fowl exporting basket is 3 feet diameter and 12 inches height. Price per bird in Hyderabad City is pullet 4 as., medium size bird 10 to 12 as., and adult or good bird 16 to 20 as.

No Caponising is practised in Hyderabad State for preparing the birds particularly for table use. Rainy season is the moulting season and also the season of epidemics. The demand is also low in this season generally and the prices fell.

112. The chicken pox, fowl cholera and white diarrhoea are known as severe epidemics. Many birds are lost annually from tick fever also though it is not an epidemic. Fowl lice though do not cause death reduce the vitality of the birds and do not let the chickens grow quick. Diseases.

The statement below gives the total population of poultry and its approximate value :—.

VARIETIES OF FOWLS		LAYING BIRD				ALL THE OTHER BIRDS

Eggs Production.

113. The object of poultry keeping is not only the birds for table use but mainly the continual source of income through egg production. The total value of the eggs sold in the course of a year in India amounts to Rs. $5\frac{1}{4}$ crores (for 33,648 lakhs of eggs) and the value of the birds themselves is about $7\frac{1}{2}$ crores of rupees. It would be appreciated that poultry provides a considerable cash income to a very large number of village producers throughout the country and constitutes an important cottage Industry.

The egg production in the case of fowls is greatest during cold season, *i.e.*, October to January and during the months of March and April and at its lowest in hot season and during the monsoon. Production of duck eggs is at its lowest in April and highest during the five months of the monsoon, *i.e.*, June to October.

Total number of hen eggs produced in Hyderabad State per annum is 23.58 crores or about 15.8 eggs per head of population for one year.

The egg production per bird in Hyderabad is :

	Per annum	Per laying
Desi Hen ..	62	7
White Leghorn ..	190	25
Rhodes Island Red ..	180	25
Cross breeds ...	120	15
Black minorcas ..	150	20
Other breeds ..	100	...

90 per cent. of the total laying birds in poultry farming are hen and 10 per cent. are ducks.

The average weight of 100 eggs of desi hen when seven days old was 8 lbs. 6 oz., (10 weighed $1\frac{3}{4}$ oz., 26 weighed $1\frac{1}{2}$ oz., 50 weighed $1\frac{1}{4}$ oz., 14 weighed below $1\frac{1}{4}$ oz.); of these 70 were fresh, 28 were cooking quality and two were stale. The shell colour of 95 per cent. was white and 5 per cent. of other tints. 100 eggs of improved hen weigh 12 lbs., 100 duck eggs weigh 13 lbs. 11 ozs., and each weighed on an average $2\frac{1}{4}$ ozs. Ducks are thus more important, besides they are fairly immune to the ravages of diseases. Statement below gives comparison with

Map showing production of fowl eggs.

One dot represents 2 lakhs eggs per annum.

other countries for 1935 (International Year Book of Agricultural Statistics, 1936-37, Rome).

Country	Annual egg production (in millions)	Percentage to the world production	Eggs laid per bird per annum average.
India Desi Fowl ..	2,737	5.3	53
India improved Fowl ..	79	..	103
Netherlands ..	1,950	3.8	125
England and Wales ..	2,964	5.7	120
Japan ..	3,609	7.0	129.6
U.S.A. ..	30,253	58.6	81.8

114. 70 per cent. of the eggs produced in the State are reserved for export trade. 22 per cent. for home consumption and 8 per cent. for hatching. In the case of eggs of the improved breeds as much as 15 per cent. are reserved for hatching. In remote villages where the egg export is difficult most of the eggs are left over for hatching purposes as the pullets fetch good price easily. Hatching is more successful during winter and rainy season especially between November to March. 10 to 12 eggs are set under a hen at a time. Success in hatching is about 60 per cent. The pullets are usually sold when they are four months old. The usual temperature for keeping the eggs in good condition for some time is 35 to 45 Degrees Fahrenheit. Eggs generally keep well for about 8 to 10 days in winter months and for 4 to 5 days in summer. The air space at the broad end of the egg gets larger as the egg gets older, so that in the case of fresh eggs it should be small and in stale eggs quite large. That is the reason why commonly the eggs are put in water to see if they are fresh or old.

Eggs consumption.

In summer in order not to let the eggs go bad the hawkers boil the eggs hard and thus preserve them from getting bad for some time.

Eggs are used in three main ways namely, for household use, for confectionery and for industrial purposes. Over 95 per cent. of the eggs consumed in India are used

Average production per head is 16.3 eggs Per annum.

Net consumption per head is 15.2 „

Per capita consumption of eggs for Hyderabad State and its neighbours is as follows:—

(1) Hyderabad State	.. 15.0
(2) Mysore State	.. 11.0
(3) Bombay Presidency	.. 15.3
(4) Madras Presidency	.. 10.7
(5) Central Provinces	.. 4.4

118. In Hyderabad City there are about half-a-dozen large confectionaries each of which consume about 5,000 to 7,000 eggs per month. Mostly the duck eggs are used. In India in the preparation of confectionery, *e.g.*, cakes, etc., hens eggs are mostly used as duck eggs are supposed to be not as 'light' as hen eggs. But experiments proved that if only the yolk of duck eggs is used the cakes will be quite as good as from hen eggs. The white of eggs can be used for other purposes, *e.g.*, glazing, bookbinding, preparation of medicine and tanning.

119. Production and consumption of eggs in Hyderabad State:—

*per capita.

120. The producers bring eggs to weekly or daily markets for sale. Eggs are also collected from villages by the "Egg Collectors" who visit the number of villages fixed for them every alternate day on cycle, etc. and deliver them to the exporting agents. The piece wage paid generally is annas four for 150 eggs collected. 5 to 8 villages are allotted to each egg-collector for the daily collection and their visits depend on the state of the road and the number of collection.

Marketing of eggs.

By sheer negligence about 14 lakhs rupees worth of eggs are simply not collected in the course of a year. This is apart from the depredations of kites, crows, jackals and other vermins to poultry itself.

In the course of marketing the loss due to stale eggs, breakage, etc. amounts to as much as 25 per cent. in a year which is valued at 57 lakhs of rupees annually. The loss in transport alone amounts to 10 per cent. or Rs. 15 lakhs.

The demand is high in cold weather, highest in November and December and thus the prices are highest during this period and lowest in March and April. Whole-

sale price per 1,000 eggs ranges from Rs. 27-14-0 to Rs. 32-2-0 and the retail price per dozen eggs is $5\frac{1}{2}$ annas in summer and $7\frac{1}{2}$ annas in winter or 3 to 4 pice each of desi hen eggs. No grading, preserving and testing of eggs is practised in Hyderabad State although steps are being taken in that direction by the marketing Department.

Import and
export of
eggs.

121. Average number of eggs packed in a basket for import into the State is 400 and weighs 25 seers and for export it is 650 weighing 30 seers. Size of baskets and shape varies. Basket for internal transportation contains 600 eggs. Eggs are imported from Madras, Ernakulam, Nidubrolu, Repalle of the Madras Presidency and Bangalore and Nittur of Mysore State to the extent of 530,000 per annum mostly in winter months.

For India as a whole China at present is the source of about 95 per cent. of the total world exports of egg products. Nizam's Dominions are quite important as an exporting centre.

The chief sources of information in the poultry survey and marketing of eggs, were the Railway Station Statistics, Customs figures and the agents of exports. The export value of fowls and eggs for the Dominions is Rs. 4.40 lakhs per annum, out of which the export of eggs valued at Rs. 10,012 per annum. Most of the eggs are exported to Bombay, Secunderabad and Hyderabad in baskets or boxes containing 600 eggs each packed in paddy husk. The baskets are made of arhar, jhao or bamboo.

Eggs are exported mostly from Gulbarga (156,000), Yadgir (14,950), Jalna, Masaipet, Gangapur to Bombay to the total extent of 170,950 eggs per annum mostly in winter months. The chief assembling centre for eggs is Gulbarga (3,000 to 5,000 eggs daily). Internal transport to Hyderabad City is from Parsoda (37,500), Ghanapur (29,500), Kohir (15,000), Alir (8,000) and other places (8,000); total (98,000).

ہدایات نسبت بہائم شماری ممالک محروسہ سرکار عالی

بابہ ۲۸ - اسفندار سنہ ۱۳۴۹ ف

ف ۱ - اغراض بہائم شماری کے لئے ہر تحصیلدار صاحب تعلقہ مہتمم بہائم شماری - بیستکار اور گرداوران تعلقہ ناظر بہائم شماری اور پٹیل و پٹواری مواضع شمار کنندہ بہائم شماری متصور ہونگے -

ف ۲ - مطبوعہ تختہ جات کی سربراہی تحصیلدار اور صدر دفاتر جاگیرات مجاز مردم شماری کو دفتر نظامت اعداد و شمار سے راست ہوگی اور موضع واری تقسیم خالصہ اور جاگیرات غیر مستثنیٰ میں دفتر تحصیل سے عمل میں آئے گی -

ف ۳ - ان مطبوعہ تختہ جات کی خانہ پری نہایت احتیاط سے ہونی چاہئے -

ف ۴ - دیہات میں پٹیل و پٹواری جو شمار کنندہ ہونگے ان کا فرض ہوگا کہ بہائم شماری کے لئے کل رعایا کے موضع و مزدعہ کو ۱۵ - اسفندار سنہ ۱۳۴۹ ف سے قبل از قبل اطلاع دیکر اس کا انتظام کر لیں کہ کل مویشی وغیرہ کھیتوں اور جنگلوں سے لاکر اپنے گاؤں کے قریب تاریخ مقررہ ہر یعنی ۲۲ - اسفندار سنہ ۱۳۴۹ ف موجود رکھیں اور ان سے متعلقہ موضع اور مزدعہ جات کے تختہ جات کی خانہ پری اوقات مقررہ میں کر رکھیں تاکہ ناظر بہائم شماری مفوضہ حلقہ کے فی صدی بیس مواضع کا دورہ کر کے تنقیح کر سکے -

ف ۵ - ناظر بہائم شماری کو لازم ہوگا کہ اپنے حلقہ کے شمار کنندگان کے کام کی خاص طور پر نگرانی رکھیں - اور ان کا فرض ہوگا کہ تختہ جات کی صحت کے متعلق اطمینان کر کے اس پر شرح تنقیحی درج کرس اور بعد ختم تنقیح پٹیل پٹواری تختہ جات بہائم شماری کو مہتمم بہائم شماری یعنی تحصیلدار صاحب تعلقہ کے پاس بھیج دیں -

ف ۶ - تحصیلدار صاحب تعلقہ کے فرائض بہ حیثیت مہتمم بہائم شماری حسب ذیل ہونگے -

(۱) تعداد مواضع کے لحاظ سے حلقہ جات کا تعین کرنا اور ان حلقہ جات کے لئے ایک ایک ناظر قرار دینا -

(۲) دفتر نظامت اعداد و شمار سے مطبوعہ تختہ جات وصول ہوتے ہی ہر موضع میں حسب ضرورت مطبوعہ تختہ جات تقسیم کرنا - اور پٹیل و پٹواریوں کو طریقہ اندراجات و تاریخہائے آغاز و اختتام کار و تنقیح و واپسی تختہ جات کے متعلق کافی ہدایات دینا - اور قبل از قبل پوری تفہیم کرنا تاکہ کسی طرح کی غلط فہمی یا کوتاہی نہ ہوئے پائے

(۳) عہدہ داران دیہی کے کام کی خاص طور پر نگرانی کرنا -

(۴) بہائم شماری کے متعلق جو انتظامات عمل میں لائے گئے ہوں یعنی حلقہ جات کا تعین اور ناظران کے تقررات سے نیز دیگر ضروری متعلقہ انتظامات بالتفصیل نظامت اعداد و شمار کو ۱۰ - اسفندار سنہ ۱۳۴۹ ف تک اطلاع دینا -

(۵) آغاز شمار سے (۲۲ - تا ۲۸ - اسفندار سنہ ۱۳۴۹ ف) تا ختم کار اپنے تعلقہ کے فیصد پانچ مواضعات کی تنقیح کرنا -

(۶) بعد وصول تختہ جات بہائم شماری کل تعلقہ کا موضع واری گوشوارہ ۲۲ - فروردی سنہ ۱۳۴۹ ف تک مرتب کر کے راست دفتر نظامت اعداد و شمار پر ایک کاپی ضلع میں روانہ کرنا مگر اس امر کی بخوبی احتیاط کی جائے کہ مبزانات درست رہیں - چنانچہ گزشتہ موقع پر اکثر مبزانات میں غلطی بائی گئی -

(۷) پٹیل و ثوادیوں سے جملہ تختہ جات بہائم شماری ہر وقت طلب کر کے انکو بہ ضبط فہرست ۲۵ - فروردی سنہ ۱۳۴۹ ف تک دفتر نظامت اعداد و شمار پر بھیجوانا چاہئے اور خاص طور پر اس امر کی نگرانی رکھی جائے کہ عہدہ داران دیہی کوئی غلط اندراجات نہ کرنے پائیں -

ف ۷ - ۲۲ - اسفندار سنہ ۱۳۴۹ ف سے حقیقی بہائم شماری اور تختہ جات کی خانہ پری شروع ہوگی اور زیادہ سے زیادہ ۲۸ - اسفندار سنہ ۱۳۴۹ ف تک ختم کر دی جائے گی - ۲۹ - اسفندار سنہ ۱۳۴۹ ف سے ۱۱ - فروردی سنہ ۱۳۴۹ ف تک تنقیح و تصحیح باحتیاط تمام کیجانی چاہئے -

ف ۸ - ان ہدایات کی پابندی بہ تعمیل فرمان خسروی علاقہ داران جاگیرات و سمستانات و پائیکہ و عہدہ داران صرف خاص مبارک کی جانب سے بھی ہونی چاہئے - چھوٹے جاگیرات اپنے اپنے علاقہ کے تختہ جات تحصیلداران متعلقہ کے پاس روانہ کریں - اور بڑے جاگیرات و سمستانات وغیرہ جو مجاز مردم شماری ہیں - حسب فقرات بالا عمل کر کے اصل تختہ جات ۲۵ - فروردی سنہ ۱۳۴۹ ف تک راست نظامت اعداد و شمار میں روانہ فرمائیں - ہر حالت میں تحصیلدار صاحبان علاقہ خالصہ ہر لازم ہوگا کہ وہ خبرگیران رہیں کہ ان کے علاقہ کے متصل جس قدر جاگیرات وغیرہ ہیں وہاں بہائم شماری کے متعلق کارروائی جاری ہے یا نہیں اور بصورت ثانی راست محکمہ سرکار صیغہ مالگزاری کو رپورٹ کر کے ذریعہ مثنیٰ دفتر نظامت اعداد و شمار کو اطلاع دیں -

ف ۹ - امید کی جاتی ہے کہ براہ کرم حسب مواقع گزشتہ باحتیاط و دلچسپی تمام جملہ عہدہ داران صاحبان اضلاع اور اہم موقعی کام کی طرف توجہ فرمائیں گے - اور جناب تعلقہ دار صاحب ضلع بطور خاص نگرانی فرمائیں گے اور دوم تعلقہ دار صاحبوں کے نام بھی احکام مناسب جاری فرمائیں گے تاکہ اس کام کی نگرانی بخوبی ہو کر بصحت تمام یہ مفید ملک کا کام انجام کو پہنچے فقط
